Nonlinear Evolution Equations That Change Type Barbara L. Keyfitz, Michael Shearer, 2012-12-06 This IMA Volume in Mathematics and its Applications NONLINEAR EVOLUTION EQUATIONS THAT CHANGE TYPE is based on the proceedings of a workshop which was an integral part of the 1988-89 IMA program on NONLINEAR WAVES The workshop focussed on problems of ill posedness and change of type which arise in modeling flows in porous materials viscoelastic fluids and solids and phase changes We thank the Coordinating Committee James Glimm Daniel Joseph Barbara Lee Keyfitz Andrew Majda Alan Newell Peter Olver David Sattinger and David Schaeffer for planning and implementing an exciting and stimulating year long program We especially thank the workshop organizers Barbara Lee Keyfitz and Michael Shearer for their efforts in bringing together many of the major figures in those research fields in which theories for nonlinear evolution equations that change type are being developed A vner Friedman Willard Miller Jr ix PREFACE During the winter and spring quarters of the 1988-89 IMA Program on Non linear Waves the issue of change of type in nonlinear partial differential equations appeared frequently Discussion began with the January 1989 workshop on Two Phase Waves in Fluidized Beds Sedimentation and Granular Flow some of the papers in the proceedings of that workshop present strategies designed to avoid the appearance of change of type in models for multiphase fluid flow *Finite Difference Methods for Nonlinear Evolution Equations* Zhi-Zhong Sun, Qifeng Zhang, Guang-hua Gao, 2023-05-08 Nonlinear evolution equations are widely used to describe nonlinear phenomena in natural and social sciences However they are usually quite difficult to solve in most instances This book introduces the finite difference methods for solving nonlinear evolution equations The main numerical analysis tool is the energy method This book covers the difference methods for the initial boundary value problems of twelve nonlinear partial differential equations They are Fisher equation Burgers equation regularized long wave equation Korteweg de Vries equation Camassa Holm equation Schrödinger equation Kuramoto Tsuzuki equation Zakharov equation Ginzburg Landau equation Cahn Hilliard equation epitaxial growth model and phase field crystal model This book is a monograph for the graduate students and science researchers majoring in computational mathematics and applied mathematics It will be also useful to all researchers in related disciplines **Nonlinear Evolution Equations** Boling Guo, Fei Chen, Jing Shao, Ting Luo, 2019-11-05 Nonlinear Evolution Equation presents state of the art theories and results on nonlinear evolution equation showing related mathematical methods and applications The basic concepts and research methods of infinite dimensional dynamical systems are discussed in detail The unique combination of mathematical rigor and physical background makes this work an essential reference for researchers and students in applied mathematics and physics **Advances in Nonlinear Evolution Equations** Mohamed Jleli, Bessem Samet, Calogero Vetro, 2025-10-03 This book presents a collection of significant and original contributions that delve into the realm of nonlinear evolution equations and their applications encompassing both theory and practical usage Serving as a dynamic platform for interdisciplinary collaboration it facilitates the exchange

of innovative ideas among scientists from diverse fields who share a keen interest in the intricate world of evolution equations. The book bridges the gap between theory and practicality offering valuable insights for researchers and enthusiasts alike transcending disciplinary boundaries. Evolution equations a subset of partial differential equations serve as mathematical tools to depict the temporal transformation of physical systems from their initial states. These equations find widespread utility in modeling various real world phenomena across diverse disciplines. Notable examples of nonlinear evolution equations include the heat equation which characterizes the evolution of heat distribution over time the nonlinear Schrödinger equation instrumental in understanding data transmission in fiber optic communication systems the Korteweg de Vries equation illuminating the dynamics of surface water waves and the portrayal of ion acoustic waves in cold plasma.

Harmonic Wave Systems: Partial Differential Equations of the Helmholtz Decomposition Victor A.

Miroshnikov, 2017-12-15 Harmonic Wave Systems is the first textbook about the computational method of Decomposition in Invariant Structures DIS that generalizes the analytical methods of separation of variables undetermined coefficients asymptotic expansions and series expansions. In recent years there has been a boom in publications on propagation of nonlinear waves described by a fascinating list of partial differential equations PDEs. The vast majority of wave problems are reducible to one dimensional ones in propagation variables. However a list of publications with two and three dimensional applications of the DIS method is brief. The book offers a comprehensive and rigorous treatment of the DIS method in two and three dimensions using the PDE approach to the Helmholtz decomposition that provides the most general background for mathematical modelling of harmonic waves in fluid dynamics electrodynamics heat transfer and other numerous areas of science and engineering which are dealing with propagation and interaction of N internal waves. **Solitons** Mohamed Atef Helal, 2022-11-12 This newly updated volume of the Encyclopedia of Complexity and Systems Science ECSS presents several mathematical models that describe this physical phenomenon including the famous non linear equation Korteweg de Vries KdV that represents the canonical form of solitons. Also there exists a class of nonlinear partial differential equations that led to solitons e.g. Kadomtsev Petviashvili KP Klein Gordon KG Sine Gordon SG Non Linear Schrödinger NLS Korteweg de Vries Burger's KdVB etc. Different linear mathematical methods can be used to solve these models analytically such as the Inverse Scattering Transformation IST Adomian Decomposition Method Variational Iteration Method VIM Homotopy Analysis Method HAM and Homotopy Perturbation Method HPM. Other non analytic methods use the computational techniques available in such popular mathematical packages as Mathematica Maple and MATLAB. The main purpose of this volume is to provide physicists engineers and their students with the proper methods and tools to solve the soliton equations and to discover the new possibilities of using solitons in multi disciplinary areas ranging from telecommunications to biology cosmology and oceanographic studies. **Non-Linear Lattice** Ignazio Licata and Sauro Succi, 2018-07-17 This book is a printed edition of the Special Issue Non Linear Lattice that was published in Entropy. **The Zakharov System and its Soliton Solutions**

Boling Guo,Zaihui Gan,Linghai Kong,Jingjun Zhang,2016-10-17 This book focuses on the theory of the Zakharov system in the context of plasma physics It has been over 40 years since the system was first derived by V E Zakharov and in the course of those decades many innovative achievements with major impacts on other research fields have been made The book represents a first attempt to highlight the mathematical theories that are most important to researchers including the existence and unique problems blow up low regularity large time behavior and the singular limit Rather than attempting to examine every aspect of the Zakharov system in detail it provides an effective road map to help readers access the frontier of studies on this system *Mathematical Reviews*,2005 **Abstract Volterra Integro-Differential Equations** Marko

Kostic,2015-05-06 The theory of linear Volterra integro differential equations has been developing rapidly in the last three decades This book provides an easy to read concise introduction to the theory of ill posed abstract Volterra integro differential equations A major part of the research is devoted to the study of various types of abstract multi term fracti
