Nonlinear Physics of DNA Ludmila V. Yakushevich, 2006-01-24 The first edition of this book was the first on the physics of DNA to go beyond the simple simplified linear approach and it has since been found that the inclusion of nonlinear effects leads to a significantly improved interpretation of experimental data This new edition naturally retains this approach but has been completely revised updated and expanded to cover recent developments Beginning with introductory chapters on DNA structure and dynamics the book also includes a comparison between linear and nonlinear approaches to the DNA molecule a chapter devoted to the statistics of nonlinear excitations of DNA and examples for the interpretation of experimental data on the dynamics of DNA in terms of nonlinear theory Essential reading for researchers in biophysics and nonlinear physics allowing biologists chemists and physicists to continue developing new and improved techniques of investigating the DNA molecule

Finely Dispersed Particles Micro Nano a Mathematical Biophysics Andrew Rubin, Galina

Riznichenko,2013-11-26 This book presents concise descriptions and analysis of the classical and modern models used in mathematical biophysics The authors ask the question what new information can be provided by the models that cannot be obtained directly from experimental data Actively developing fields such as regulatory mechanisms in cells and subcellular systems and electron transport and energy transport in membranes are addressed together with more classical topics such as metabolic processes nerve conduction and heart activity chemical kinetics population dynamics and photosynthesis The main approach is to describe biological processes using different mathematical approaches necessary to reveal characteristic features and properties of simulated systems With the emergence of powerful mathematics software packages such as MAPLE Mathematica Mathcad and MatLab these methodologies are now accessible to a wide audience Molecular Machines Giovanni Zocchi,2018-07-10 Molecular Machines presents a dynamic new approach to the physics of enzymes and DNA from the perspective of materials science Unified around the concept of molecular deformability how proteins and DNA stretch fold and change shape this book describes the complex molecules of life from the innovative perspective of materials properties and dynamics in contrast to structural or purely chemical approaches It covers a wealth of topics including nonlinear deformability of enzymes and DNA the chemo dynamic cycle of enzymes supra molecular constructions with internal stress nano rheology and viscoelasticity and chemical kinetics Brownian motion and barrier crossing Essential reading for researchers in materials science engineering and nanotechnology the book also describes the landmark experiments that have established the materials properties and energy landscape of large biological molecules Molecular Machines is also ideal for the classroom It gives graduate students a working knowledge of model building in statistical mechanics making it an essential resource for tomorrow s experimentalists in this cutting edge field In addition mathematical methods are introduced in the bio molecular context for example DNA conformational transitions are used to illustrate the transfer matrix formalism The result is a generalized approach to mathematical problem solving that enables students to apply their findings more broadly Molecular Machines represents the next leap forward in nanoscience as researchers strive to harness proteins enzymes and DNA as veritable machines in medicine technology and beyond **Journal of Computational and Theoretical Nanoscience** ,2005 *Philosophical Transactions* ,2004 *Complex Sciences* Jie Zhou,2009-06-26 I was invited to join the Organizing Committee of the First International Conference on Complex Sciences Theory and Applications Complex 2009 as its ninth member At that moment eight distinguished colleagues General Co chairs Eugene Stanley and Gaoxi Xiao Technical Co chairs J nos Kert sz and Bing Hong Wang Local Co chairs Hengshan Wang and Hong An Che Publicity Team Shi Xiao and Yubo Wang had spent hundreds of hours pushing the conference half way to its birth Ever since then I have been amazed to see hundreds of papers flooding in reviewed and commented on by the TPC members Finally more than 200 contributions were lected for the proceedings currently in your hands They include about 200 papers from the main conference selected from more than 320 submissions and about 33 papers from the five collated
