Foundations of Mechanics Ralph Abraham,Jerrold E. Marsden,2008 For many years this book has been viewed as a classic treatment of geometric mechanics It is known for its broad exposition of the subject with many features that cannot be found elsewhere The book is recommended as a textbook and as a basic reference work for the foundations of differentiable and Hamiltonian dynamics Complexity M. Mitchell Waldrop,2019-10-01 If you liked Chaos you ll love Complexity Waldrop creates the most exciting intellectual adventure story of the year The Washington Post In a rarified world of scientific research a revolution has been brewing Its activists are not anarchists but rather Nobel Laureates in physics and economics and pony tailed graduates mathematicians and computer scientists from all over the world They have formed an iconoclastic think tank and their radical idea is to create a new science complexity They want to know how a primordial soup of simple molecules managed to turn itself into the first living cell and what the origin of life some four billion years ago can tell us about the process of technological innovation today This book is their story the story of how they have tried to forge what they like to call the science of the twenty first century Lucidly shows physicists biologists computer scientists and economists swapping metaphors and reveling in the sense that epochal discoveries are just around the corner Waldrop has a special talent for relaying the exhilaration of moments of intellectual insight The New York Times Book Review Where I enjoyed the book was when it dove into the actual question of complexity talking about complex systems in economics biology genetics computer modeling and so on Snippets of rare beauty here and there almost took your breath away Medium Waldrop provides a good grounding of what may indeed be the first flowering of a new science

Publishers Weekly Nonlinear Phenomena in Physics and Biology ,1990 Nonlinear Phenomena in Physics and Biology Richard H. Enns,2012-12-06 The Advanced Study Institute ASI on Nonlinear Phenomena in Physics and Biology was held at the Banff Centre Banff Alberta Canada from 17 29 August 1980 The Institute was made possible through funding by the North Atlantic Treaty Organization who supplied the major portion of the financial aid the National Research and Engineering Council of Canada and Simon Fraser University The availability of the Banff Centre was made possible through the co sponsorship with NATO of the ASI by the Canadian Association of Physicists 12 invited lecturers and 82 other participants attended the Institute Except for two lectures on nonlinear waves by Norman Zabusky which were omitted because it was felt that they already had been exhaustively treated in the available literature this volume contains the entire text of the invited lectures In addition short reports on some of the contributed talks have also been included The rationale for the ASI and this resulting volume was that

many of the hardest problems and most interesting phenomena being studied by scientists today are nonlinear in nature. The nonlinear models involved often span several different disciplines, a simple example being the Volterra type model in population dynamics which has its analogue in nonlinear optics and plasma physics, the 3 wave problem in the discussion of the social behavior of animals and in biological competition and selection at the molecular level.
