*Nonmonotonic Logic* V. Wiktor Marek, Miroslaw Truszczyński, 2013-03-14 When I first participated in exploring theories of nonmonotonic reasoning in the late 1970s I had no idea of the wealth of conceptual and mathematical results that would emerge from those halting first steps. This book by Wiktor Marek and Miroslaw Truszczyński is an elegant treatment of a large body of these results. It provides the first comprehensive treatment of two influential nonmonotonic logics: autoepistemic and default logic, and describes a number of surprising and deep unifying relationships between them. It also relates them to various modal logics studied in the philosophical logic literature and provides a thorough treatment of their applications as foundations for logic programming semantics and for truth maintenance systems. It is particularly appropriate that Marek and Truszczyński should have authored this book since so much of the research that went into these results is due to them. Both authors were trained in the Polish school of logic and they bring to their research and writing the logical insights and sophisticated mathematics that one would expect from such a background. I believe that this book is a splendid example of the intellectual maturity of the field of artificial intelligence and that it will provide a model of scholarship for us all for many years to come.

**A Logical Theory of Nonmonotonic Inference and Belief Change** Alexander Bochman, 2013-03-14 The main subject and objective of this book are logical foundations of nonmonotonic reasoning. This bears a presumption that there is such a thing as a general theory of nonmonotonic reasoning as opposed to a bunch of systems for such a reasoning existing in the literature. It also presumes that this kind of reasoning can be analyzed by logical tools broadly understood just as any other kind of reasoning. In order to achieve our goal we will provide a common logical basis and semantic representation in which different kinds of nonmonotonic reasoning can be interpreted and studied. The suggested framework will subsume basic forms of nonmonotonic inference including not only the usual skeptical one but also various forms of credulous, brave and defeasible reasoning as well as some new kinds such as contraction inference relations that express relative independence of pieces of data. In addition the same framework will serve as a basis for a general theory of belief change which among other things will allow us to unify the main approaches to belief change existing in the literature as well as to provide a constructive view of the semantic representation used. This book is a monograph rather than a textbook with all its advantages mainly for the author and shortcomings for the reader.

**Logics in Artificial Intelligence** Farinas Luis Del Cerro, Ulrich Furbach, 2003-05-20 This volume contains the papers selected for presentation at the conference and two abstracts from invited speakers. The programme committee selected these 25 papers from 12 countries out of 65 submissions from 17 countries. The first JELIA meeting was in Rosco, France ten years ago. Afterwards it took place in the Netherlands, Germany, United Kingdom, Portugal and now again in Germany. The proceedings of the last four meetings appeared in the Springer Verlag LNCS series and a

selected series of papers of the English and the Portuguese meeting appeared as special issues in the Journal of Applied Non Classical Logics and in the Journal of Automated Reasoning respectively The aim of JELIA was and still is to provide a forum for the exchange of ideas and results in the domain of foundations of AI focusing on rigorous descriptions of some aspects of intelligence These descriptions are promoted by applications and produced by logical tools and methods The papers contained in this volume cover the following topics 1 Logic programming 2 Epistemic logics 3 Theorem proving 4 Non monotonic reasoning 5 Non standard logics 6 Knowledge representation 7 Higher order logics We would like to warmly thank the authors the invited speakers the m bers of the program committee and the additional reviewers listed below They all have made these proceedings possible and ensured their quality

Levesque,Fiora Pirri,2012-12-06 It is a pleasure and an honor to be able to present this collection of papers to Ray Reiter on the occasion of his 60th birthday To say that Ray's research has had a deep impact on the field of Artificial Intelligence is a considerable understatement Better to say that anyone thinking of doing work in areas like deductive databases default reasoning diagnosis reasoning about action and others should realize that they are likely to end up proving corollaries to Ray's theorems Sometimes studying related work makes us think harder about the way we approach a problem studying Ray's work is as likely to make us want to drop our way of doing things and take up his This is because more than a mere visionary Ray has always been a true leader He shows us how to proceed not by pointing from his armchair but by blazing a trail himself setting up camp and waiting for the rest of us to arrive The International Joint Conference on Artificial Intelligence clearly recognized this and awarded Ray its highest honor the Research Excellence award in 1993 before it had even finished acknowledging all the founders of the field The papers collected here sample from many of the areas where Ray has done pioneering work One of his earliest areas of application was databases and this is reflected in the chapters by Bertossi et al and the survey chapter by Minker

**Logics in Artificial Intelligence** ,2000 **Nonmonotonic Logics** Karl Schlechta,1997-01-15 Nonmonotonic logics were created as an abstraction of some types of common sense reasoning analogous to the way classical logic serves to formalize ideal reasoning about mathematical objects These logics are nonmonotonic in the sense that enlarging the set of axioms does not necessarily imply an enlargement of the set of formulas deducible from these axioms Such situations arise naturally for example in the use of information of different degrees of reliability This book emphasizes basic concepts by outlining connections between different formalisms of nonmonotonic logic and gives a coherent presentation of recent research results and reasoning techniques It provides a self contained state of the art survey of the area addressing researchers in AI to Symbolic and Quantitative Approaches to Reasoning and Uncertainty ,2003 AI\*IA ...
