

Nontraditional Machining Processes

Electrochemical Machining (ECM)

- ▶ Essentially a reverse metal-plating process
- ▶ The process takes place in a conducting fluid called **electrolyte** that is pumped in under pressure between the electrode and the work piece.
- ▶ As the work piece material is de-plated it is flushed away by the flow of electrolyte. The residue from the work piece is filtered from the electrolyte.

Nontraditional Manufacturing Processes:

Nontraditional Manufacturing Processes Gary F. Benedict, 2017-10-19 This book provides a convenient single source of information on advanced machining material forming and joining processes. It describes available technologies that use tools such as high velocity material jets, pulsed magnetic fields, light beams, electrochemical reactions, and more. Organized by type of process (mechanical, chemical, electrochemical, and thermal), the book discusses 31 important nontraditional processes and covers each process's principles, equipment capabilities, and operating parameters. The author includes a list of nontraditional manufacturing firms, nearly 250 figures that clearly illustrate the technologies, and numerous bibliographic citations for additional reading.

Nontraditional Machining Processes J. Paulo Davim, 2013-06-14 Nontraditional machining employs processes that remove material by various methods involving thermal, electrical, chemical, and mechanical energy or even combinations of these. Nontraditional Machining Processes covers recent research and development in techniques and processes which focus on achieving high accuracies and good surface finishes. Parts machined without burrs or residual stresses especially with materials that cannot be machined by conventional methods. With applications to the automotive, aircraft, and mould and die industries, Nontraditional Machining Processes explores different aspects and processes through dedicated chapters. The seven chapters explore recent research into a range of topics including laser assisted manufacturing, abrasive water jet milling, and hybrid processes. Students and researchers will find the practical examples and new processes useful for both reference and for developing further processes. Industry professionals and materials engineers will also find Nontraditional Machining Processes to be a source of ideas and processes for development and industrial application.

Nontraditional Machining Processes E. J. Weller, 1983 Advanced Machining Processes Hassan Abdel-Gawad El-Hofy, 2005-03-22 Today's stringent design requirements and difficult to machine materials such as tough super alloys, ceramics, and composites have made traditional machining processes costly and obsolete. As a result, manufacturers and machine design engineers are turning to advanced machining processes. These machining processes utilize electrical, chemical, and optimal sources of energy to bind, form, and cut materials. El Hofy rigorously explains how each of these advanced machining processes work, their machining system components, process variables, and industrial applications, making this book the perfect guide for anyone
