Oligomorphic Permutation Groups:

Oligomorphic Permutation Groups Peter J. Cameron, 1990-06-29 The study of permutations groups has always been closely associated with that of highly symmetric structures. The objects considered here are countably infinite but have only finitely many different substructures of any given finite size. This book discusses such structures their substructures and their automorphism groups using a wide range of techniques

Oligomorphic Permutation Groups Peter Jephson

Cameron, 2014-05-14 The study of permutation groups has always been closely associated with that of highly symmetric structures. The objects considered here are countably infinite but have only finitely many different substructures of any given finite size. They are precisely those structures which are determined by first order logical axioms together with the assumption of countability. This book concerns such structures their substructures and their automorphism groups. A wide range of techniques are used group theory combinatorics Baire category and measure among them. The book arose from lectures given at a research symposium and retains their informal style whilst including as well many recent results from a variety of sources. It concludes with exercises and unsolved research problems

Ordered Groups and Infinite Permutation Groups

W.C. Holland, 2013-12-01 The subjects of ordered groups and of infinite permutation groups have long enjoyed a symbiotic relationship. Although the two subjects come from very different sources they have in certain ways come together and each has derived considerable benefit from the other. My own personal contact with this interaction began in 1961. I had done Ph.D. work on sequence convergence in totally ordered groups under the direction of Paul Conrad. In the process I had encountered pseudo convergent sequences in an ordered group G which are like Cauchy sequences except that the differences between terms of large index approach not 0 but a convex subgroup G of G . If G is normal then such sequences are conveniently described as Cauchy sequences in the quotient ordered group G/G . If G is not normal of course G/G has no group structure though it is still a totally ordered set. The best that can be said is that the elements of G permute G/G in an order preserving fashion. In independent investigations around that time both P. Conrad and P. Cohn had showed that a group admits a total right ordering if and only if the group is a group of automorphisms of a totally ordered set. In a right ordered group the order is required to be preserved by all right translations unlike a two sided ordered group where both right and left translations must preserve the order

Finite and Infinite

Combinatorics in Sets and Logic Norbert W. Sauer, R.E. Woodrow, B. Sands, 2012-12-06 This volume contains the accounts of papers delivered at the Nato Advanced Study Institute on Finite and Infinite Combinatorics in Sets and Logic held at the Banff Centre Alberta Canada from April 21 to May 4 1991. As the title suggests the meeting brought together workers interested in the interplay between finite and infinite combinatorics set theory graph theory and logic. It used to be that infinite set theory finite combinatorics and logic could be viewed as quite separate and independent subjects. But more and

more those disciplines grow together and become interdependent of each other with ever more problems and results appearing which concern all of those disciplines I appreciate the financial support which was provided by the N A T O Advanced Study Institute programme the Natural Sciences and Engineering Research Council of Canada and the Department of Mathematics and Statistics of the University of Calgary 111 te meeting on Finite and Infinite Combinatorics in Sets and Logic followed two other meetings on discrete mathematics held in Banff the Symposium on Ordered Sets in 1981 and the Symposium on Graphs and Order in 1984 The growing inter relation between the different areas in discrete mathematics is maybe best illustrated by the fact that many of the participants who were present at the previous meetings also attended this meeting on Finite and Infinite Combinatorics in Sets and Logic

Classification of P-oligomorphic Groups, Conjectures of Cameron and

Macpherson Justine Falque,2019 This PhD thesis falls under the fields of algebraic combinatorics and group theory Precisely it brings a contribution to the domain that studies profiles of oligomorphic permutation groups and their behaviors The first part of this manuscript introduces most of the tools that will be needed later on starting with elements of combinatorics and algebraic combinatorics We define counting functions through classical examples with a view of studying them we argue the relevance of adding a graded algebra structure on the counted objects We also bring up the notions of order and lattice Then we provide an overview of the basic definitions and properties related to permutation groups and to invariant theory We end this part with a description of the P lya enumeration method which allows to count objects under a group action The second part is dedicated to introducing the domain this thesis comes withinthe scope of It dwells on profiles of relational structures and more specifically orbital profiles If G is an infinite permutation group its profile is the counting function which maps any n 0 to the number of orbits of n subsets for the inducedaction of G on the finite subsets of elements Cameron conjectured that the profile of G is asymptotically equivalent to a polynomial whenever it is bounded by a polynomial

Another stronger conjecture was later made by Macpherson it involves a certain structure of graded algebra on the orbits of subsets created by Cameron the orbit algebra and states that if the profile of G is bounded by a polynomial then its orbit algebra is finitely generated As a start in our study of this problem we develop some examples and get our first hints towards a resolution by examining the block systems of groups with profile bounded by a polynomial that we call P oligomorphic as well as the notion of subdirect product The third part is the proof of a classification of P oligomorphic groups with Macpherson's conjecture as a corollary First we study the combinatorics of the lattice of block systems which leads to identifying one special generalized such system that consists of blocks of blocks with good properties We then tackle the elementary case when there is only one such block of blocks for which we establish a classification The proof borrows to the subdirect product concept to handle synchronizations within the group and relied on an experimental approach on computer to first conjecture the classification In the general case we evidence the structure of a semi direct product involving the minimal normal subgroup of finite index and some finite group This allows to formalize a classification of all P oligomorphic groups the main result of this thesis and to deduce the form of the orbit algebra little more than an explicit algebra of invariants of a finite group This implies the conjectures of Macpherson and Cameron and a deep understanding of these groups The appendix provides parts of the code that was used and a glimpse at that resulting from the classification afterwards that allows to manipulate P oligomorphic groups by appropriate algorithmics Last we include our earlier weaker proof of the conjectures *International Congress of Mathematicians, Kyoto, Japan, August 21-29, 1990: Plenary lectures, section lectures, ICMI lectures, 1990* *Proceedings of the International Congress of Mathematicians, August 21-29, 1990, Kyoto, Japan* Ichirō Satake, 1991 **Bulletin of the Institute of Combinatorics and Its Applications**, 2004
