Surveying and Levelling: Volume I S. S. Bhavikatti, 2013-12-30 This book is meant for the first course on Surveying and Levelling of most of the universities. It covers all basic methods of surveying and levelling applications of surveying and levelling calculation of areas and volumes of earth work involved in the field work. Minor instruments used in the field are also explained. The author has taken care to use simple and lucid language and to explain the subject with neat sketches. A number of problems are solved to make the subject clear. Diploma and degree students of Civil Engineering, Architecture and Mining will find this book useful.

Barry's Introduction to Construction of Buildings Stephen Emmitt, 2010-02-15 This new edition of Barry's Introduction to Construction of Buildings adds considerable new material but remains based on the original concept of explaining construction technology through key functional performance requirements for the main elements common to all buildings. Of particular note in this new edition are a fully integrated approach to environmental issues and construction sustainability. The rest of the material has been updated as required with particular attention paid to the illustrations. With over 150 new photographs and many revised figures plus a supporting website at www.wiley.com/go/barrysintroduction students learning the fundamentals of building and construction on undergraduate and other NQF level 5-6 courses will find this the ideal introduction to the subject.

Advanced Materials and Techniques for Structural Monitoring, Analysis and Control Chun-Xu Qu, Liang Ren, Yunlai Zhou, Sadegh Shams, Qian Feng, 2024-06-18 Assessing the service status and maintaining the safety of existing structures are critical to the sustainable operations of various engineering and cross-industry including civil infrastructures, railways and machinery. Static and dynamic structural characteristics play a key role in the global deterioration assessment of the structural performance which has enabled structural monitoring and analysis technology to become an active focus in the engineering area. Meanwhile, structural control has been widely used in modern structural engineering. Structural control devices are implemented to enhance deteriorating structures and mitigate natural disasters. Through advanced structural control technology, the structural responses can be controlled. These structural control techniques include passive, active or semi-active reverse forces which aim to modify structural stiffness, mass and damping with minimal control force. Structural control, monitoring and analysis complement each other ensuring the safety of the structure to the greatest extent.
