Optik Physikalischtechnische Grundlagen Und Anwendungen:

Optik ,2008 Optik Heinz Haferkorn,1980 **Biophotonics** Jürgen Popp,Marion Strehle,2008-09-08 An account of a three year research program funded by the German government in which physicists and physical chemists set off together with biologists and physicians to develop new techniques for medical and biological problems and ended up with sophisticated scientific solutions and innovative equipment partly ready for the market It not only includes a concise description of the new discoveries but also offers also an introduction to the various fields within optics Digital Holographic Methods Stephan Stuerwald,2018-10-12 This book presents not only the simultaneous combination of optical methods based on holographic principles for marker free imaging real time trapping identification and tracking of micro objects but also the application of substantial low coherent light sources and non diffractive beams It first provides an overview of digital holographic microscopy DHM and holographic optical tweezers as well as non diffracting beam types for minimal invasive real time and marker free imaging as well as manipulation of micro and nano objects It then investigates the design concepts for the optical layout of holographic optical tweezers HOTs and their optimization using optical simulations and experimental methods In a further part the book characterizes the corresponding system modules that allow the addition of HOTs to commercial microscopes with regard to stability and diffraction efficiency Further based on experiments and microfluidic applications it demonstrates the functionality of the combined setup and discusses several types of non diffracting beams and their application in optical manipulation The book shows that holographic optical tweezers including several non diffracting beam types like Mathieu beams combined parabolic and Airy beams not only open up the possibility of generating efficient multiple dynamic traps for micro and nano particles with forces in the pico and nano newton range but also the opportunity to exert optical torque with special beams like Bessel beams which can facilitate the movement and rotation of particles by generating microfluidic flows The last part discusses the potential use of a slightly modified DHM HOT system to explore the functionality of direct laser writing based on a two photon absorption process in a negative photoresist with a continuous wave laser *Machine Vision* Jürgen Beyerer,Fernando Puente León,Christian Frese,2015-10-01 The book offers a thorough introduction to machine vision It is organized in two parts The first part covers the image acquisition which is the crucial component of most automated visual inspection systems All important methods are described in great detail and are presented with a reasoned structure The second part deals with the modeling and processing of image signals and pays particular regard to methods which are relevant for automated visual inspection

Cataract and Lens Surgery Mehdi Shajari,Siegfried Priglinger,Thomas Kohnen,Thomas C. Kreutzer,Wolfgang J. Mayer,2023-06-18 This book summarizes the current knowledge on lens surgery Not only are the surgical procedures described in detail but experts share with the reader many useful practical tips for individual surgical steps to achieve the best possible surgical result In addition to the focus on surgery pre and post operative care and complication management is
