Khalil, 2017-06-23 For over a quarter of a century high gain observers have been used extensively in the design of output feedback control of nonlinear systems This book presents a clear unified treatment of the theory of high gain observers and their use in feedback control Also provided is a discussion of the separation principle for nonlinear systems this differs from other separation results in the literature in that recovery of stability as well as performance of state feedback controllers is given The author provides a detailed discussion of applications of high gain observers to adaptive control and regulation problems and recent results on the extended high gain observers In addition the author addresses two challenges that face the implementation of high gain observers high dimension and measurement noise Low power observers are presented for high dimensional systems The effect of measurement noise is characterized and techniques to reduce that effect are presented The book ends with discussion of digital implementation of the observers Readers will find comprehensive coverage of the main results on high gain observers rigorous self contained proofs of all results and numerous examples that illustrate and provide motivation for the results The

Systems, Models and Feedback: Theory and Applications A. Isidori, Tarn, 2013-03-09 It is a great honor and privilege to have this opportunity of celebrating the 65th birthday of Professor Antonio Ruberti by holding an International Conference on Systems Models and Feedback The conference and this volume which contains its proceedings is a tribute to Professor Ruberti in acknowledgement of his major contributions to System Theory at a time in which this area was emerging and consolidating as an independent discipline his role as a leader of the Italian academic community his activity in promoting and fostering close scientific relations between Italian and U S scholars in Systems and Control The format of this conference is inspired by a series of seminars initiated exactly twenty years ago under the direction of Professor Ruberti in Italy and Professor R R Mohler in the U S By bringing together many authoritative talents from both countries these seminars were instrumental in promoting the expansion of System Theory in new areas notably that of Nonlinear Control and were the key to successful scientific careers for many of the younger attendants

Investigation, Development and Application of Optimal Output Feedback Theory Nesim Halyo, 1987 Some measures of eigenvalue and eigenvector sensitivity applicable to both continuous and discrete linear systems are developed and investigated An infinite series representation is developed for the eigenvalues and eigenvectors of a system The coefficients of the series are coupled but can be obtained recursively using a nonlinear coupled vector difference equation A new sensitivity measure is developed by considering the effects of unmodeled dynamics It is shown that the sensitivity is high when any unmodeled eigenvalue is near a modeled eigenvalue Using a simple example where the sensor dynamics have been neglected it is shown that high feedback gains produce high eigenvalue eigenvector sensitivity The smallest singular value of the return difference is shown not to reflect eigenvalue sensitivity since it increases with the feedback gains Using an upper bound obtained from the infinite series a procedure to evaluate whether the sensitivity to parameter variations is within given acceptable bounds is developed and demonstrated by an example
