Endocrine and Organ Specific Autoimmunity George S. Eisenbarth, 1999 Organ specific autoimmune disorders as a group are responsible for a major portion of all debilitating and at times life threatening chronic diseases Over the past decade more has been learned concerning the molecular pathogenesis of these disorders than during the past 100 years

Autoantibodies in Organ Specific Autoimmune Diseases Karsten Conrad, Werner Schößler, Falk Hiepe, Marvin J. Fritzler, 2011

The Heart in Systemic Autoimmune Diseases Andrea Dorea, 2004-01-20 This first volume represents the state of the art in the field of cardiovascular disease and autoimmune rheumatic diseases Systemic autoimmune diseases comprise a family of conditions that share common pathogenetic mechanisms as well as a multi organ involvement including the heart This volume has been subdivided into three parts In the first part the immune mechanisms involved in cardiac damage have been considered The role of proinflammatory and regulatory cytokines in driving an autoimmune response to

cardiac self tissues has been analysed Moreover the prevalence the clinical meaning and the hypothetical pathogenicity of a broad spectrum of organ and non organ specific autoantibodies have been discussed in detail In the second part of the volume the role of humoral and innate immunity in promoting the development of atherosclerotic plaque has been extensively reviewed along with the newly discovered anti inflammatory properties of statins These two parts of the volume deal with exciting aspects of this topic suggesting a very close connection between heart diseases and immunology Finally in the third part the cardiac manifestations observed in the major systemic autoimmune conditions have been comprehensively examined This book yields an impressive body of well ordered information highlighting key references and summarising the experience of a selected panel of distinguished physician scientists actively involved in the field of cardiovascular disease and systemic autoimmunity

The Heart in Rheumatic, Autoimmune and Inflammatory Diseases Udi Nussinovitch, 2017-02-10 The prevalence of autoimmune diseases and rheumatic conditions is constantly increasing Autoimmune diseases affect approximately 7-10% of the population of the United States while more than 50 000 000 American adults suffer from some type of arthritis The Heart in Rheumatic Autoimmune and Inflammatory Diseases examines the complex mechanisms relating to cardiac diseases from a pathophysiological and clinical point of view Autoimmune rheumatic diseases can affect the coronary vessels myocardium pericardium heart valves and the conduction system The diagnosis of these unique cardiac complications necessitates medical awareness and a high index of suspicion Increased risk of advanced atherosclerosis plays a pivotal role in the development of cardiac diseases in systemic rheumatic and autoimmune illnesses Yet other complex immune mediated mechanisms may contribute to the pathogenesis Patients optimal care requires coordination between the primary caregiver the rheumatologist immunologist and cardiologist Screening for cardiovascular risk factors recognition of high risk patients and identification of subclinical cardiac conditions are of great importance Moreover regulation of inflammation as well as abnormal immune responses and the initiation of early treatments should be the focus of patient management A continuous attempt to identify novel therapeutic targets and change the natural history of the underlying disease and its cardiac manifestations is in progress The book aims at providing the readers with a state of the art collection of up to date information regarding clinically important topics based on experts perspectives This book was a result of an extended coordinated collaboration of one hundred and fifty four distinguished scientists from thirty one countries around the globe A review of common as well as unusual yet clinically significant medical cardiac complications of prevalent rheumatic autoimmune and inflammatory diseases Focuses on aspects of pathophysiological processes clinical presentations screening tests prognostic implications and novel therapeutic approaches Presents an up to date level of evidence and strengths of recommendations for suggested therapies and reviews all randomized clinical trials meta analyses and other supporting published clinical findings

The Autoimmune Diseases M. Eric Gershwin, George C. Tsokos, 2013-12-03 Since publication of the 4th Edition of The Autoimmune Diseases in 2006 the understanding of the immune mechanisms underlying

autoimmunity and autoimmune disease has significantly deepened and broadened This fully revised 5th Edition incorporates new material and combines common themes underlying inductive and effector mechanisms and therapies that relate generally to the autoimmune disorders It discusses the biological basis of disease at genetic molecular cellular and epidemiologic levels and includes expanded coverage of autoinflammatory disease and autoimmune responses to tumors Gives a thorough and an important overview on the entire field framing individual disease chapters with information that compares and contrasts each disorder and therapy Provides thorough up to date information on specific diseases along with clinical applications in an easily found reference for clinicians and researchers interested in certain diseases Keeps readers abreast of current trends and emerging areas in the field Ensures that content is not only up to date but applicable and relevant

Autoantibodies in Organ Specific Autoimmune Diseases - A Diagnostic Reference Karsten Conrad,Werner Schößler,Falk Hiepe,Marvin J. Fritzler,2017 Organ-specific Autoimmunity in the NOD Mouse Stella Ann Mayo,2006 The Non obese Diabetic NOD mouse is a model for Type 1 Diabetes T1D The spontaneous development of T1D in NOD mice suggests that mechanisms responsible for the induction and maintenance of immune regulation are defective in these mice To determine if defective immune regulation is responsible for rendering the NOD mouse susceptible to T1D we tested the

hypothesis that NOD mice have an enhanced overall susceptibility to autoimmune diseases We evaluated the spontaneous and induced immune responses to self antigens to determine if global autoimmune responses exist in the NOD mice We also compared MOG35-55 induced Experimental Autoimmune Encephalomyelitis EAE in NOD mice to that of diabetes resistant NOD B10.Idd9 NOD B10.Idd5 and NOR.Lt mice to determine their susceptibility to spinal cord inflammation and to delineate if the nature of the immune response is different among strains Disparity in clinical disease and Th repertoire was observed despite identical expression of MHC alleles CD8 positive T cells present in the NOD and NOD B10.Idd9 mice are greatly reduced in the NOR mice during the course of disease furthermore NOR APCs are deficient in processing CTL epitopes from longer peptides In addition EAE resistant NOR mice utilize J β 2.2 while EAE susceptible NOD and NOD B10.Idd9 recruit T cells expressing J β 2.7 In addition adoptive transfer experiments indicate target tissue gene expression provides protection from autoimmunity
