## **Organic Syntheses By Oxidation With Metal Compounds:**

*Organic Syntheses by Oxidation with Metal Compounds* W.J. Mijs, C.R.H.I. de Jonge, 2013-11-11 This book is concerned with the synthetic aspects of oxidation reactions involving metal compounds which are readily available or easy to prepare. The sequence followed in the chapters is as follows: a general introduction, a limited treatment of reaction mechanisms to serve as a basis for synthesis and scope, and limitations of the oxidant system mostly in terms of substrate and product classes. Finally, at the end of each chapter, representative synthetic procedures are given together with relevant experimental considerations. A general table is included as an appendix. This contains substrate classes and resulting product classes referring to the oxidative procedures in the chapters. The table provides the synthetic organic chemist with a quick overview of oxidation possibilities with metal-containing oxidants, enabling him to select the right method for his purpose. The editors hope that not only organic research chemists in industry and at universities but also advanced undergraduate and graduate students in organic chemistry will find this book a useful guide in the design, understanding and practical performance of oxidative organic syntheses. The editors are grateful to the authors not only for their contributions containing interesting new developments in oxidation chemistry but also for the way they fitted the text into the general framework given for the book. Their suggestions and comments are gratefully acknowledged. Thanks are also due to Mrs. A. I. Rohnstrom Ouwejan, secretary to the editors for her administrative support.

## **Hydrocarbon Chemistry** George A. Olah, Árpád Molnár, 2003-09-10

Hydrocarbons and their transformations play major roles in chemistry as raw materials and sources of energy. Diminishing petroleum supplies, regulatory problems and environmental concerns constantly challenge chemists to rethink and redesign the industrial applications of hydrocarbons. Written by Nobel Prize winner George Olah and hydrocarbon expert Árpád Molnár, the completely revised and expanded Second Edition of Hydrocarbon Chemistry provides an unparalleled contemporary assessment of the field, presenting basic concepts, current research and future applications. Hydrocarbon Chemistry begins by discussing the general aspects of hydrocarbons, the separation of hydrocarbons from natural sources and the synthesis from C1 precursors, with recent developments for possible future applications. Each successive chapter deals with a specific type of hydrocarbon transformation. The Second Edition includes a new section on the chemical reduction of carbon dioxide, focusing on catalytic, ionic, electrocatalytic, photocatalytic and enzymatic reductions, as well as a new chapter on new catalysts and activation methods, combinatorial chemistry and environmental chemistry. Other topics covered include major processes of the petrochemical industry such as cracking, reforming, isomerization and alkylation, Derivation reactions to form carbon-heteroatom bonds, Hydrocarbon oxidations, Metathesis, Oligomerization and polymerization of hydrocarbons. All chapters have been updated by adding sections on recent developments to review new advances and results. Essential reading for practicing scientists in industry, polymer and catalytic chemists, as well as researchers and graduate students, Hydrocarbon Chemistry, Second Edition remains the benchmark text in its field.
