**Name Reactions in Organic Chemistry** Alexander R. Surrey, 2013-10-22 Name Reactions in Organic Chemistry 2nd Edition incorporates new pertinent material and brings up to date the name reactions described in the first edition Along with this revision several additional name reactions have been included As with the first edition the selections were based on general interest recurrence in the literature and the contributions of the name chemist to the historical development of organic chemistry Although the writer does not pretend to be an historian of chemistry it seemed desirable to include along with the reactions pertinent information regarding the chemist's background his training his contemporaries and his contributions This book contains 103 name reactions arranged alphabetically The general plan was to present a description of each reaction its scope applicability and limitations and to bring it up to date in regard to any new developments

**Catalysis from A to Z** Boy Cornils, 2007 Comprehensive succinct and easy to use this updated third edition contains 50% more content in three volumes More than 200 top scientists worldwide have contributed over 8 000 entries with 3 300 cross references on all aspects of bio heterogeneous and homogeneous catalysis

Library Handbook for Organic Chemists Andrew Joseph Poss, 2000 Every chemical research project begins with a thorough and expedient search of the chemical literature As the size and complexity of the chemical literature continues to grow at an outstanding rate the chemist is continuously confronted with the task of wading through a mountain of information that may elude even the most versed computer searcher The LIBRARY HANDBOOK FOR ORGANIC CHEMISTS is designed to direct the researcher to the most appropriate references and to streamline organize and optimize the process of searching the chemical literature While directing the researcher to all appropriate literature resources this handbook also provides a thorough understanding of the organization of the information contained As each section is designed for quick assimilation of the information necessary to locate a reference researchers do not have to read the entire book or even a complete section to understand and search the chemical literature This handbook leads the infrequent searcher stepwise through the literature to the answer to a search For those conducting computer searches it will help in selecting the appropriate database and it will also aid in searching commands As for the experienced librarian this handbook will become the source to check in order to ensure that all the basis have been covered

Indian Journal of Chemistry ,2003      **Second Supplements to the 2nd Edition of Rodd's Chemistry of Carbon Compounds** Sainsbury,2001-11-12 To date the second edition of the Rodd s series consists of 71 volumes and over 30 000 pages Rodd s Chemistry of Carbon Compounds is continuing with a short series of topical volumes on emerging subjects that are not covered in detail in the main volumes The first two topical volumes will cover organic electrochemistry and asymmetric catalysis Asymmetric synthesis initiated by metal catalysts is of course not a new topic and asymmetric reduction and epoxidation of alkenes in particular are major subject areas covered widely in the Supplements to the 2nd Edition of Rodd s Chemistry of the Carbon Compounds However there has been a huge increase in the use of asymmetrically catalysed reactions in other areas in the last five years or so and this is why this subject has been specially selected to form the content of a Topical Volume The book does not dwell at length upon topics of great importance such as Sharpless epoxidation or upon the control of stereochemistry through catalytic reduction of double bonds These subjects have been exhaustively surveyed elsewhere Instead it concentrates upon those topics that appear to be up and coming Only time can tell if all will be adopted as widely and successfully as their predecessors but it now seems clear that chemists have at their disposal an ever increasing and formidable array of methods to effect total topological control of even the most complex target molecule This book written by some of the best young chemists concentrating upon work in their own subject areas provides a snap shot of

the current state of play in this a key test of their scientific ingenuity In the Cumulative Index will be found the entire contents of the 2nd edition and both of the supplements together with a list of main titles and chapter headings for each volume This index will enable the reader to make better and easier searches in Rodd which is the most compact comprehensive and accessible survey of organic chemistry ever written **Chemistry of Carbon Compounds** E. H. Rodd, 1964 **Progress in Heterocyclic Chemistry** Gordon Gribble, J. Joule, 2008 This is the 19th annual volume of Progress in Heterocyclic Chemistry which covers the literature published during 2006 As with previous volumes in the series Volume 19 will enable the reader to keep abreast of developments in heterocyclic chemistry in an effortless way
