## **Organism A Holistic Approach To Biology:**

*The Organism* Kurt Goldstein, 1995-02-06 Foreword by Oliver Sacks Kurt Goldstein 1878 1965 was already an established neuropsychologist when he emigrated from Germany to the United States in the 1930s This book his magnum opus and widely regarded as a modern classic in psychology and biology grew out of his dissatisfaction with traditional natural science techniques for analyzing living beings It offers a broad introduction to the sources and ranges of application of the holistic or organismic research program that has since become a standard part of biological thought Goldstein was especially concerned with the breakdown of organization and the failure of central controls that take place in catastrophic responses to situations such as physical or mental illness But he was equally attuned to the amazing powers of the organism to readjust to such catastrophic losses if only by withdrawal to a more limited range that it could manage by a redistribution of its reduced energies thus reclaiming as much wholeness as new circumstances allowed Goldstein's theses in *The Organism* have had an important impact on philosophical and psychological thought throughout the twentieth century as evidenced in the work of Maurice Merleau Ponty Georges Canguilhem Ernst Cassirer and Ludwig Binswanger

**FOREWORD BY K.S. LASHLEY.** Kurt Goldstein, 1963 *The Organism* Kurt Goldstein, 2000-04-04 In this remarkable book by one of the great psychologists and neurologists of the early twentieth century Kurt Goldstein presents a summation of his holistic theory of the human organism In the course of his studies on brain damaged soldiers during the First World War Goldstein became aware of the failure of contemporary biology and medicine to genuinely understand both the impact of such injuries and the astonishing adjustments that patients made to them He challenged reductivist approaches that dealt with localized symptoms insisting instead that an organism be analyzed in terms of the totality of its behavior and interaction with its surrounding milieu He was especially concerned with the breakdown of organization and the failure of central cerebral controls that take place in catastrophic responses to situations such as physical or mental illness But Goldstein was equally attuned to the amazing powers of the organism to readjust to such devastating losses if only by withdrawal to a more limited range of activity that it could manage by a redistribution of its reduced energies thus reclaiming as much wholeness as new circumstances allowed Goldstein's concepts in *The Organism* have had a major impact on philosophical and psychological thought throughout this century as can be seen in the work of Maurice Merleau Ponty Georges Canguilhem Ernst Cassirer Ludwig Binswanger and Roman Jakobson not to mention the wide ranging field of Gestalt psychology

*The Organism* Kurt Goldstein, 1963 *Organism* Kurt Goldstein, 1939 *Difference and Multiplicity* Manu Bazzano, 2025-09-30 Psychological and psychotherapeutic orientations often neglect the notion that the individual is not one unit but rather a coalition of affects Providing a multidisciplinary framework for the practice of psychotherapy and

philosophy this book explores and embraces this multiplicity within the human psyche and challenges the reader to explore and celebrate difference within society Chapters reframe the breadth and scope of psychotherapy as an endeavour at the service of both healing and care while also fostering bold exploration emphasizing the risk and adventure of being alive Through clinical studies first person accounts forays into contemporary philosophy psychoanalysis psychotherapy and the arts this book presents insights that inspire readers to be in the world with courage compassion and kindness with the sense that we do not have to know who we are before becoming active citizens of the world Bazzano then extends that exploration to the domain of public life by examining contemporary challenges related to climate change race gender ethnicity and more This book is an essential read for therapy practitioners and professionals of related disciplines who want to expand their knowledge and find different ways to understand and practise their art

Scot Danforth,2009 With

the passage of Public Law 94 142 in 1975 the learning disability construct gained national legitimacy Feeding that political achievement behind the very idea of a learning disability was the development of a science that blended neurology psychology and education This book tracks the historical creation of the science of learning disabilities beginning with the clinical research with brain injured World War I soldiers conducted by German physician Kurt Goldstein It traces the growth of the two primary research traditions the psycholinguistic theory of Samuel Kirk and the movement education of Newell Kephart exploring how specific scientific orientations theories and practices led to the birth of the learning disability in the United States

*The Extended Organism* J. Scott Turner,2009-06-01 Can the structures that animals build from the humble burrows of earthworms to towering termite mounds to the Great Barrier Reef be said to live However counterintuitive the idea might first seem physiological ecologist Scott Turner demonstrates in this book that many animals construct and use structures to harness and control the flow of energy from their environment to their own advantage Building on Richard Dawkins s classic The Extended Phenotype Turner shows why drawing the boundary of an organism s physiology at the skin of the animal is arbitrary Since the structures animals build undoubtedly do physiological work capturing and channeling chemical and physical energy Turner argues that such structures are more properly regarded not as frozen behaviors but as external organs of physiology and even extensions of the animal s phenotype By challenging dearly held assumptions a fascinating new view of the living world is opened to us with implications for our understanding of physiology the environment and the remarkable structures animals build
