Joseph Silk's persuasive and impassioned case for putting scientific discovery at the forefront of lunar exploration. The Moon offers opportunities beyond our wildest imaginings and plans to return are rapidly gaining momentum around the world. NASA aims to build a habitable orbiting space station to coordinate lunar development and exploration while European and Chinese space agencies are planning lunar villages and the mining of precious resources dwindling here on Earth. Powerful international and commercial interests are driving the race to revisit the Moon but lunar infrastructures could also open breathtaking vistas onto the cosmos. Silk describes how the colonization of the Moon could usher in a thrilling new age of scientific exploration and lays out what the next fifty years of lunar science might look like. With lunar telescopes of unprecedented size situated in permanently dark polar craters and on the far side of the Moon we could finally be poised to answer some of the most profound questions confronting humankind including whether we are alone in the Universe and what our cosmic origins are. Addressing both the daunting challenges and the immense promise of lunar exploration and exploitation. Back to the Moon reveals how prioritizing science and in particular lunar astronomy will enable us to address the deepest cosmic mysteries.

**The Race** James Schefter, 2010-06-30 Indispensable to anyone interested in the space race. Houston Chronicle. In 1963 a young reporter for Time Life named James Schefter was given a dream job: cover America's race to the moon. Since the astronauts were under contract to Life for their stories, Schefter was given complete access to the biggest players at NASA. But at the time his primary role was to excite the public about the new expensive experimental space program and he couldn't write about everything he saw. In *The Race* he does. From drunken astronaut escapades to near disasters to ferocious political battles, the race to the moon was anything but the smooth process it appeared. There were vicious fights between the engineers, feuds and practical jokes, near fatal accidents and dozens of brave, smart and colorful characters pulling off the greatest exploration in the history of humankind. Like *Undaunted Courage* and *D Day*, this is a tale of achieving the extraordinary against extraordinary odds. As incredible as the official story of the space program is, the true behind-the-scenes tale is more thrilling, more entertaining and ultimately more ennobling.

**Science-fiction** Everett Franklin Bleiler, Richard Bleiler, 1998. *Complementing Science Fiction: The Early Years* which surveys science fiction published in book form from its beginnings through 1930; the present volume covers all the science fiction printed in the genre magazines *Amazing*, *Astounding* and *Wonder* along with offshoots and minor magazines from 1926 through 1936. This is the first time this historically important literary phenomenon which stands behind the enormous modern development of science fiction has been studied thoroughly and accurately. The heart of the book is a series of descriptions of all 1,835 stories published during this period plus bibliographic information. Supplementing this are many useful features: detailed histories of each of the magazines; an issue-by-issue roster of contents; a technical analysis of the art work; brief authors' biographies; poetry and letter indexes; a theme and motif index of approximately 30,000 entries; and general indexes. *Science Fiction: The Gernsback Years* is not only indispensable for reference librarians, collectors, readers and scholars interested in science
