

# Chapter # 14: TRANSPORT

## LYMPHATIC SYSTEM

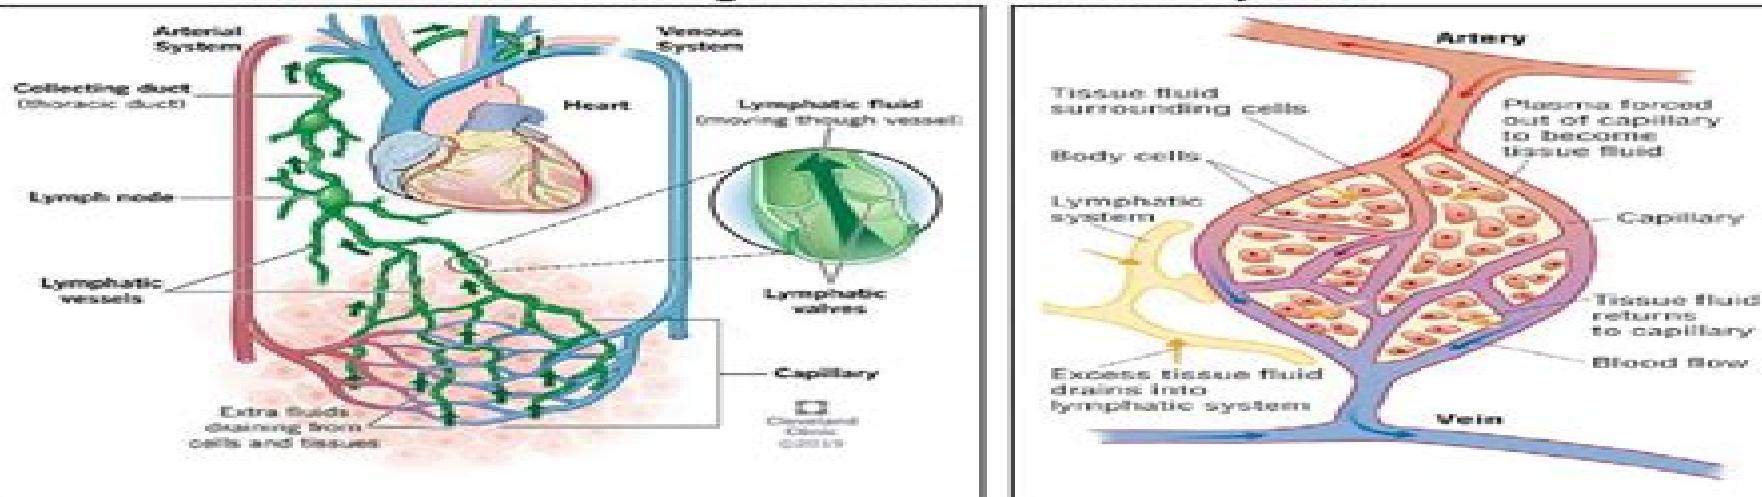

It is a complex drainage system that drains the lymph from various tissues of the body and returns it to the blood circulatory system.

The lymphatic system consists of:

- **Lymph,**
- a network of ducts called **lymph vessels** or **lymphatic lymph capillaries**, and
- **lymph organs** including **lymph nodes**, spleen, thymus, tonsils, bone marrow and some of the patches of tissues in vermiform appendix and small intestine

### ➤ LYMPH:

- Lymph is a colourless body fluid that contains lymphocytes (a granular WBCs), small proteins and fats.
- Lymph is derived from the intercellular or tissue fluid.
- Tissue fluid is formed when blood passes through the capillaries and plasma of the blood (without RBCs and blood proteins) diffuses out of the walls of capillaries and collects into the intercellular spaces.
- About 85% of the tissue fluid re-enters the blood at the venous end of the blood capillaries.
- The remaining 15% of the tissue fluid drains into blindly ending lymphatic capillaries as lymph along with WBCs, cell debris and micro-organisms (like bacteria) and are transported back to the heart through lymphatic system.
- Lymph takes fluid substances from the cells and intercellular spaces which cannot penetrate the blood capillaries.
- It is a medium of exchange between blood and body cells.
