## **Lymphocyte Activation:**

*Lymphocyte Activation* L. E. Samelson, 1994      *Mechanisms of Lymphocyte Activation and Immune Regulation II* S. Gupta, 2013-06-29 The activation of lymphocytes by physiologic ligands has become a central area of study for immunologists. Furthermore, lymphocytes offer many advantages for the study of general aspects of receptor-mediated cellular activation. For these reasons, research on the cellular and molecular aspects of the activation of lymphocytes by antigens, antigen analogues, lymphokines, and other growth factors has expanded enormously in the last several years. A series of conferences, The International Conferences on Lymphocyte Activation, has been initiated to meet the growing need for a forum for the discussion of the topics that are included within the area of lymphocyte activation. This volume represents the proceedings of the Second International Conference on Lymphocyte Activation and Immune Regulation held on February 18-20, 1988, at Newport Beach, California. The proceedings comprise four major sections. The first deals with the T cell receptors and T cell activation. It includes a model for the T cell receptor interaction with a complex of MHC plus antigen structure of the T cell receptor and their distinct isotypic forms, the role of the zeta chain in the expression and structure of T cell receptors, and its role in transmembrane signalling. The use of somatic cell mutants in the study of signal transduction function of the T cell antigen receptors and the early and late steps of signal transduction via a T cell antigen receptor are discussed.

*Mechanisms of Lymphocyte Activation and Immune Regulation X* Sudhir Gupta, William E. Paul, Ralph Steinman, 2007-03-20 This volume is edited by Dr Sudhir Gupta, internationally recognized expert in Immunology, Professor of Medicine, Pathology, Microbiology, and Molecular Genetics. Topics include toll receptors, dendritic cells, NK cells, and complement receptors.      **Mechanisms of Lymphocyte Activation and Immune Regulation** Sudhir Gupta, William E. Paul, Anthony Fauci, 2013-11-11 During the past 5 years, rapid progress has been made in the understanding of biochemical pathways for signal transduction in lymphocyte activation. Gene cloning technology has been instrumental in defining and making available in pure form a number of growth and differentiation factors in the characterization of their receptors and in the delineation of genes for the T cell receptor. This book is divided into 6 sections. Section 1 deals with the molecular structure of the T cell receptor. Section 2 discusses the role of the T cell receptor, membrane ion channels, and biochemical pathways of signal transduction in T cell activation. The molecular structures and biological and immunological effects of interleukin 1, interleukin 2, and interleukin 3 are presented in Section 3. This section also details the structure of the interleukin 2 receptor and its use as a target for therapy for certain leukemias. Section 4 includes the biochemical events which occur following the delivery of the signal for B cell activation, proliferation, and differentiation by antigen growth differentiation factors. The molecular structure of B cell stimulating factors is also discussed. The role of oncogene expression in cellular activation and differentiation is included in Section 5. The cellular and molecular basis of natural killing and the molecular basis of cyclosporin A-mediated immunosuppression are discussed in detail in Section 6. We hope this book will serve as a

reference work on basic mechanisms of lymphocyte activation proliferation and differentiation for immunologists and molecular biologists

**Mechanisms of Lymphocyte Activation and Immune Regulation IV** Sudhir Gupta, Thomas Waldmann, 2012-12-06 In recent years rapid progress has been made in the areas of T cell and B cell biology cell cell and cell matrix stroma interactions The use of isolated subunits of the T cell receptor invariant chains has been instrumental in defining their role in signal transduction and tyrosine phosphorylation A role of src family phosphotyrosine kinases in T cell activation has been demonstrated and several phosphotyrosine kinase substrates have been identified and their functions characterized Homologous recombinant techniques have led to the development of murine strains that lack CD4 or CD8 expression These models are likely to be instrumental in studying the role of T cell subsets in autoimmune disorders tissue transplant rejection and tumor rejection A role of major histocompatibility complex I in the development of T cell subsets and NK cells has been defined Recent data suggest a role of interaction between plasma membrane molecules of activated T helper cells and B cells B cells primed with plasma membrane of activated T helper cells and cytokines and interaction between bone marrow stromal cells and B cell progenitors and precursors in the B cell development proliferation and differentiation The structure and functions of adhesion molecules especially with regard to signal transduction and homing events are better defined

**Lymphocyte Activation and Immune Regulation IX** Sudhir Gupta, Eugene Butcher, William E. Paul, 2012-12-06 This volume is divided into three sections Section I deals with factors that regulate the development and maturation of T cells and B cells and lymphocyte traffic The significance of C kit Bcl 6 IL 7 and Vav in the development of T and B lymphocytes is discussed A role of lymphotoxins and VAP I in trafficking of leucocytes is reviewed Finally the trafficking and homing characteristics of T cell and B cell subsets and the regulation of these processes during the immune response is presented Section II discusses various aspects of naive and memory T cell biology including clonal expansion reprogramming of genes including those encoding cytokines and cytotoxic granules changes in the expression of cell surface proteins involved in cell cell adhesion homing of naive and memory T cells the role of MHC and cytokines in the maintenance of naive and memory T cells and the characterization and differentiation of virus specific memory T cell heterogeneity in mice and humans Novel methods of visualization of immune cells and immune systems are reviewed in Section III

**Mechanisms of Lymphocyte Activation and Immune Regulation VII** Sudhir Gupta, Alan Sher, Rafi Ahmed, 2011-09-28 Proceedings of the Seventh International Conference held in New Port Beach California February 6 8 1998

**Mechanisms of Lymphocyte Activation and Immune Regulation V** Sudhir Gupta, William E. Paul, Anthony DeFranco, Roger Perlmutter, 2013-06-29 Signaling through antigen receptor initiates a complex series of events resulting in the activation of genes that regulate the development proliferation and differentiation of lymphocytes During the past few years rapid progress has been made in understanding the molecular basis of signaling pathways mediated by antigen and cytokine receptors These pathways involve protein tyrosine kinases which are coupled to downstream regulatory molecules

including small guanine nucleotide binding proteins e g p21 OS serine threonine kinases e g members of the ERK family and a large group of transcription factors More recently there have been breakthroughs in elucidating the genetic defects underlying three X linked primary immunodeficiency diseases in humans This volume surveys aspects of these rapidly developing areas of research The book is divided into 5 different sections Section I deals with signaling pathways in B lymphocytes It includes a contemporary assessment of B cell antigen receptor structures and discussion of the role of Ig a lg B polypeptides in linking the antigen receptor to intracellular signal transduction pathways The role of accessory molecules in the regulation of signaling by the B cell antigen receptor is also considered Section II adopts a similar approach to the analysis of the antigen receptor on T lymphocytes The importance of specialized signaling motifs in the CD3 polypeptides mechanisms whereby these motifs may interact with the lymphocyte specific protein tyrosine kinases and the downstream consequences of these interactions are reviewed In addition the role of antigen induced apoptosis in the generation of immunological tolerance is discussed

**Mechanisms of Lymphocyte Activation and Immune Regulation III** Sudhir Gupta, William E. Paul, Max D. Cooper, Ellen V. Rothenberg, 2012-12-06 Recent advances in the understanding of the major events that shape the immune recognition system have been remarkable The analysis of immunoglobulin Ig gene organization and Ig repertoire diversification in lower vertebrates has provided new insight into this process in mammals Similarly the understanding of the early development of lymphocytes and of the acquisition of immunological tolerance has been aided by elegant studies in quail chicken chimeras using the power of the distinctive markers of the constitutive cells of these birds Great strides have been made in understanding the role played by major histocompatibility complex MHC molecules in antigen presentation and in repertoire selection within the thymus The use of transgenic mice expressing specific T cell receptor TCR genes has elucidated the process of both positive and negative selection In parallel there has been considerable progress in our understanding of tolerance based in part on the use of markers for the V $\beta$  genes of T cell receptors and in part on the analysis of the behavior of long term T cell lines This has led to the realization that both clonal deletion and clonal anergy may play critical roles in the maintenance of unresponsiveness to self antigen Molecular analysis of the requirements for expression of membrane immunoglobulin molecules has revealed the existence of a complex that appears to be of critical importance in mediating signalling through Ig receptors In addition major insights have been obtained into the regulation of expression of genes of immunologic interest

**Mechanisms of Lymphocyte Activation and Immune Regulation VI** Sudhir Gupta, J. John Cohen, 2013-06-29 Since programmed cell death was first described in insects in 1964 and apoptosis was described in 1972 rapid progress has been made in understanding the basic mechanisms and genes regulating programmed cell death and apoptosis In addition defects in various genes regulating programmed cell death have been delineated in several experimental models of human diseases This volume surveys various aspects of these rapidly developing areas of research in programmed cell death apoptosis This volume should be of interest to basic

immunologists and molecular biologists The volume begins with a historical perspective of cell death The remainder of the volume is divided into four different parts Part I deals with the signaling pathways in apoptosis including cell cycle control of apoptosis role of ceramide in apoptosis role of antibody signaling and biochemical regulation of apoptosis The mechanisms for recognition of apoptotic lymphocytes by macrophages are also reviewed Part II examines the role of various genes that regulate apoptosis including the role of Fas FasL and other TNF family members in apoptosis and homeostatic regulation of immune response Recently described splice variants and their influence on apoptosis are also reviewed and the role of the members of the Bcl 2 family in apoptosis is discussed in detail Part III reviews various aspects of apoptosis in B lymphocytes including mechanisms that regulate apoptosis survival of B lymphocytes and the regulation of Fas mediated apoptosis in B lymphocytes
