*Contributions to Convergence Analysis of Noisy Optimization Algorithms* Sandra Astete morales, 2016 This thesis exposes contributions to the analysis of algorithms for noisy functions It exposes convergence rates for linesearch algorithms as well as for random search algorithms We prove in terms of Simple Regret and Cumulative Regret that a Hessian based algorithm can reach the same results as some optimal algorithms in the literature when parameters are tuned correctly On the other hand we analyse the convergence order of Evolution Strategies when solving noisy functions We deduce log log convergence We also give a lower bound for the convergence rate of the Evolution Strategies We extend the work on revaluation by applying it to a discrete settings Finally we analyse the performance measure itself and prove that the use of an erroneous performance measure can lead to misleading results on the evaluation of
