Non Crystalline Films For Device Structures:

Non-Crystalline Films for Device Structures ,2001-12-11 Physics of Thin Films is one of the longest running continuing series in thin film science consisting of 25 volumes since 1963 The series contains quality studies of the properties of various thin films materials and systems In order to be able to reflect the development of today s science and to cover all modern aspects of thin films the series starting with Volume 20 has moved beyond the basic physics of thin films It now addresses the most important aspects of both inorganic and organic thin films in both their theoretical and their technological aspects Volume 29 consists of chapters pulled from Hari Singh Nalwa s forthcoming Handbook of Thin Film Materials ISBN 0 12 512908 4 The chapters were selected because they deal exclusively with amorphous film structures and because they have a common relevance to semiconductor or electronic devices and circuits These are subjects not yet stressed in the Thin Films series

Advances in Plasma-Grown Hydrogenated Films ,2001-12-12 Physics of Thin Films is one of the longest running continuing series in thin film science consisting of 25 volumes since 1963 The series contains quality studies of the properties of various thin films materials and systems In order to be able to reflect the development of today s science and to cover all modern aspects of thin films the series starting with Volume 20 has moved beyond the basic physics of thin films It now addresses the most important aspects of both inorganic and organic thin films in both their theoretical and their technological aspects Starting with Volume 30 the title of the series Thin Films is being changed to Thin Films and Nanostructures We feel that this new titlerefects more accurately the rapidly growing inclusion of research anddevelopment efforts on nanostructures especially in relation to novel solid state device formats

Intrinsically Conducting Polymers: An Emerging Technology M. Aldissi,2013-04-17 This book contains the majority of the papers presented at the NATO Advanced Research Workshop ARW held in Burlington Vermont USA on October 12 15 1992 This ARW was the first of its kind to address the subject of intrinsically conducting polymers with an emphasis on processing and technological applications The NATO ARW format was followed in that the subjects addressed here were limited in number but discussed in detail with the attendance being limited to a small number of selected scientists The ARW brought together lecturers who are leaders in their respective fields from a wide range of NATO and non NATO countries a total of 11 countries with the support of the NATO Scientific Affairs Division and some support from Champlain Cable Corporation The total number of participants was 33 and the number of presentations was 24 The speakers were chosen based on the topics selected for this workshop and represented industry universities and government laboratories The field of conducting polymers has grown rapidly during the past few years with important developments in materials processing and fabrication that brought about active research programs focusing on the use of these polymers as smart materials in technological applications and devices in academic and industrial research laboratories
