Nondeductive Inference:

Within Reason John W. Burbidge, 1995-05-31 Seldom does human reasoning fit the standards of deduction. Yet logicians have tended to use the strict standards of deductive validity for assessing all inferences. *Within Reason* develops instead a way of assessing arguments and inferences that is directly appropriate to the non deductive forms people regularly use. It uses analogy and argument from analogy to provide a thread that unites various forms raising objections inductions of various sorts arguments to explanation or hypothesis and arguments to action. The discussion is developed progressively at each stage building on the skills learned previously. And at each stage the book suggests ways of assessing the strength of reasoning. Most of the examples are taken from the great texts of the Western tradition. In the exercises that form an integral part of each chapter an even broader range of writing is presented offering instructors an extraordinary variety of texts at various levels to assign to their students. The thesis implicit in the book is that induction arguments to explanation and arguments to action are all sophisticated forms of arguments from analogy. Burbidge is concerned not simply to warn against the misuse of non deductive reasoning but also to develop a more positive theory that allows us both to better understand the workings of non deductive reasoning and to better employ it.

Rethinking Logic: Logic in Relation to Mathematics, Evolution, and Method Carlo Cellucci, 2013-10-09 This volume examines the limitations of mathematical logic and proposes a new approach to logic intended to overcome them. To this end the book compares mathematical logic with earlier views of logic both in the ancient and in the modern age including those of Plato Aristotle Bacon Descartes Leibniz and Kant. From the comparison it is apparent that a basic limitation of mathematical logic is that it narrows down the scope of logic confining it to the study of deduction without providing tools for discovering anything new. As a result mathematical logic has had little impact on scientific practice. Therefore this volume proposes a view of logic according to which logic is intended first of all to provide rules of discovery that is non deductive rules for finding hypotheses to solve problems. This is essential if logic is to play any relevant role in mathematics science and even philosophy. To comply with this view of logic this volume formulates several rules of discovery such as induction analogy generalization specialization metaphor metonymy definition and diagrams. A logic based on such rules is basically a logic of discovery and involves a new view of the relation of logic to evolution language reason method and knowledge particularly mathematical knowledge. It also involves a new view of the relation of philosophy to knowledge. This book puts forward such new views trying to open again many doors that the founding fathers of mathematical logic had closed historically.

A Critical Reflection on Automated Science Marta Bertolaso, Fabio Sterpetti, 2020-02-05 This book provides a critical reflection on automated science and addresses the question whether the computational tools we developed in last decades are changing the way we humans do science. More concretely Can machines replace scientists in crucial aspects of scientific practice. The contributors to this book re think and refine some of the main concepts by which science is understood drawing a fascinating picture of the developments we

expect over the next decades of human machine co evolution The volume covers examples from various fields and areas such as molecular biology climate modeling clinical medicine and artificial intelligence The explosion of technological tools and drivers for scientific research calls for a renewed understanding of the human character of science This book aims precisely to contribute to such a renewed understanding of science Internalism and Epistemology Timothy McGrew,Lydia McGrew,2007-01-24 Aims to address some key criticisms of internalism and shows that they do not hit their mark This work articulates a version of a central objection to externalism It is is useful for scholars with an interest in epistemology

Nondeductive Inference Robert Ackermann,2019-10-30 Originally published in 1966 An introduction to current studies of kinds of inference in which validity cannot be determined by ordinary deductive models In particular inductive inference predictive inference statistical inference and decision making are examined in some detail The last chapter discusses the relationship of these forms of inference to philosophical notions of rationality Special features of the monograph include a discussion of the legitimacy of various criteria for successful predictive inference the development of an intuitive model which exhibits the difficulties of choosing probability measures over infinite sets and a comparison of rival views on the foundations of probability in terms of the amount of information which the members of these schools believe suitable for fruitful formalization The bibliographies include articles by statisticians accessible to students of symbolic logic The

Making of Mathematics Carlo Cellucci,2022-03-07 This book offers an alternative to current philosophy of mathematics heuristic philosophy of mathematics In accordance with the heuristic approach the philosophy of mathematics must concern itself with the making of mathematics and in particular with mathematical discovery In the past century mainstream philosophy of mathematics has claimed that the philosophy of mathematics cannot concern itself with the making of mathematics but only with finished mathematics namely mathematics as presented in published works On this basis mainstream philosophy of mathematics has maintained that mathematics is theorem proving by the axiomatic method This view has turned out to be untenable because of G del s incompleteness theorems which have shown that the view that mathematics is theorem proving by the axiomatic method does not account for a large number of basic features of mathematics By using the heuristic approach this book argues that mathematics is not theorem proving by the axiomatic method but is rather problem solving by the analytic method The author argues that this view can account for the main items of the mathematical process those being mathematical objects demonstrations definitions diagrams notations explanations applicability beauty and the role of mathematical knowledge Danish Yearbook of Philosophy vol. 23 Selskabet for Filosofi og Psykologi, FGCS '92 ,1992 Statistics in Science R. Cooke,D. Costantini,2012-12-06 An inference may be defined as a passage of thought according to some method In the theory of knowledge it is customary to distinguish deductive and non deductive inferences Deductive inferences are truth preserving that is the truth of the premises is preserved in the conclusion As a result the conclusion of a deductive inference is already contained in the premises although we may not know

this fact until the inference is performed Standard examples of deductive inferences are taken from logic and mathematics Non deductive inferences need not preserve truth that is thought may pass from true premises to false conclusions Such inferences can be expansive or ampliative in the sense that the performances of such inferences actually increases our putative knowledge Standard non deductive inferences do not really exist but one may think of elementary inductive inferences in which conclusions regarding the future are drawn from knowledge of the past Since the body of scientific knowledge is increasing it is obvious that the method of science must allow non deductive as well as deductive inferences Indeed the explosive growth of science in recent times points to a prominent role for the former Philosophers of science have long tried to isolate and study the non deductive inferences in science The inevitability of such inferences one the one hand juxtaposed with the poverty of all efforts to identify them constitutes one of the major cognitive embarrassments of our time

Revisiting Inference. A Multidisciplinary Approach Wafa Ben Amor Mnif,2019-08-21 Doctoral Thesis Dissertation from the year 2016 in the subject Speech Science Linguistics University of Sfax language English abstract Previous literature on inference has often approached it from a single perspective offering but an incomplete understanding of its full potential For this reason this study proposes a multidisciplinary approach to inference Synthesizing the contributions of Logic and Pragmatics this research builds a new Inference Taxonomy The study claims that this newly developed theoretical model can be transformed into a discourse descriptive tool meant to complement traditional tools offered by Discourse Analysis The most important contributions of the research is that it attempts to offer a new understanding of inference develop that theoretical understanding into a new instrument that serves to describe discourse and gauge the functioning of that instrument In order to test the functioning of the new descriptive tool and to explore the insights it can offer the study makes use of a corpus based approach It applies theoretical and methodological findings to a corpus of ten texts The analysis consists in providing a systematic description of the different types of inference underlying the texts which is congruent with the inherently qualitative method used Quantification is also used with the purpose of investigating the implications of the qualitative analysis The corpus analysis illustrates how the new inference based instrument can provide detailed descriptions of the inferential structure of texts It equally sheds light on the correlations that may exist between inferences found in a text and the type or topic of this text possible similarities between different texts in inferential terms clear tendencies or common inferential features et cetera Thus the findings substantiate the research major claims The outcome of the study is a fine tuned multidisciplinary inference taxonomy that is translatable into an instrument of descriptive discourse analysis which can be optimized to cover comparative evaluative critical and pedagogic ends Internalism and Epistemology Timothy J.
