## **Nondestructive Characterization Of Materials Iv:**

Nondestructive Characterization of Materials IV J.F. Bussière, Robert E. Green, C.O. Ruud, 1992-02-29 There is a great deal of interest in extending nondestructive technologies beyond the location and identification of cracks and voids. Specifically there is growing interest in the application of nondestructive evaluation (NDE) to the measurement of physical and mechanical properties of materials. The measurement of materials properties is often referred to as materials characterization; thus nondestructive techniques applied to characterization become nondestructive characterization (NDC). There are a number of meetings, proceedings, and journals focused upon nondestructive technologies and the detection and identification of cracks and voids. However, the series of symposia of which these proceedings represent the fourth are the only meetings uniquely focused upon nondestructive characterization. Moreover, these symposia are especially concerned with stimulating communication between the materials mechanical and manufacturing engineer and the NDE technology oriented engineer and scientist. These symposia recognize that it is the welding of these areas of expertise that is necessary for practical development and application of NDC technology to measurements of components for in service life time and sensor technology for intelligent processing of materials. These proceedings are from the fourth international symposia and are edited by C. O. Ruud, J. F. Bussière, and R. E. Green Jr. The dates, places, etc. of the symposia held to date are as follows:

Symposia on Nondestructive Methods for Material Property Determination  
DATES: April 6-8, 1983  
PLACE: Hershey, PA, USA

Bass, Richard R. Stern, 2001 Electrical, Optical and Magnetic Properties of Organic Solid-State Materials IV: Volume 488 John R. Reynolds, 1998-05-06 This book shows that research involving electrical optical and magnetic properties of organic solid state materials continues to grow both in scope and technological importance Early studies of charge transport in conducting polymers have evolved from the elucidation of fundamental structure function relationships to applications such as batteries simple electrical devices such as diodes chemical sensors antistatic coatings microwave and millimeter wave absorbing materials and photochromic devices A particularly exciting evolution has been the discovery and development of organic light emitting diodes OLEDs which appear to be nearing commercialization in an amazingly short period of time This application is of particular interest because both electrical and optical properties must be considered Topics include organic light emitting materials and devices photonic materials and devices conducting and electroactive polymers and materials molecular and supramolecular engineering organic metals and magnetic materials and poster presentations Semiconductor Process and Device Performance Modelling: Volume 490 Scott T.
