Makhankov, Oktay K. Pashaev, 2012-12-06 Proceedings of the 6th International Workshop 16-26 July 1990 Dubna USSR **Nonlinear Evolution Equations** Nina B. Maslova, 1993 The book is devoted to the questions of the long time behavior of solutions for evolution equations connected with kinetic models in statistical physics There is a wide variety of problems where such models are used to obtain reasonable physical as well as numerical results Fluid Mechanics Gas Dynamics Plasma Physics Nuclear Physics Turbulence Theory etc The classical examples provide the nonlinear Boltzmann equation Investigation of the long time behavior of the solutions for the Boltzmann equation gives an approach to the nonlinear fluid dynamic equations From the viewpoint of dynamical systems the fluid dynamic equations arise in the theory as a tool to describe an attractor of the kinetic equation **Dynamics of Evolutionary Equations** George R. Sell, Yuncheng You, 2013-04-17 The theory and applications of infinite dimensional dynamical systems have attracted the attention of scientists for quite some time Dynamical issues arise in equations that attempt to model phenomena that change with time The infinite dimensional aspects occur when forces that describe the motion depend on spatial variables or on the history of the motion In the case of spatially dependent problems the model equations are generally partial differential equations and problems that depend on the past give rise to differential delay equations Because the nonlinearities occurring in these equations need not be small one needs good dynamical theories to understand the long time behavior of solutions Our basic objective in writing this book is to prepare an entree for scholars who are beginning their journey into the world of dynamical systems especially in infinite dimensional spaces In order to accomplish this we start with the key concepts of a semiflow and a flow As is well known the basic elements of dynamical systems such as the theory of attractors and other invariant sets have their origins here Nonlinear Evolution Equations Boling Guo, Fei Chen, Jing Shao, Ting Luo, 2019-11-05 Nonlinear Evolution Equation presents state of the art theories and results on nonlinear evolution equation showing related mathematical methods and applications The basic concepts and research methods of infinite dimensional dynamical systems are discussed in detail The unique combination of mathematical rigor and physical background makes this work an essential reference for researchers and students in applied mathematics and physics **Nonlinear Evolution Equations That Change Type** Barbara L. Keyfitz, Michael Shearer, 1990-09-24 This IMA Volume in Mathematics and its Applications NONLINEAR EVOLUTION EQUATIONS THAT CHANGE TYPE is based on the proceedings of a workshop which was an integral part of the 1988-89 IMA program on NONLINEAR WAVES The workshop focussed on problems of ill posedness and change of type which arise in modeling flows in porous materials viscoelastic fluids and solids and phase changes We thank the Coordinating Committee James Glimm Daniel Joseph Barbara Lee Keyfitz

Andrew Majda Alan Newell Peter Olver David Sattinger and David Schaeffer for planning and implementing an exciting and stimulating year long program We especially thank the workshop organizers Barbara Lee Keyfitz and Michael Shearer for their efforts in bringing together many of the major figures in those research fields in which theories for nonlinear evolution equations that change type are being developed A vner Friedman Willard Miller J r ix PREFACE During the winter and spring quarters of the 1988 89 IMA Program on Non linear Waves the issue of change of type in nonlinear partial differential equations appeared frequently Discussion began with the January 1989 workshop on Two Phase Waves in Fluidized Beds Sedimentation and Granular Flow some of the papers in the proceedings of that workshop present strategies designed to avoid the appearance of change of type in models for multiphase fluid flow Nonlinear Evolution Equations and Dynamical Systems Sandra Carillo,Orlando Ragnisco,2012-12-06 Nonlinear Evolution Equations and Dynamical Systems NEEDS provides a presentation of the state of the art Except for a few review papers the 40 contributions are intentionally brief to give only the gist of the methods proofs etc including references to the relevant litera ture This gives a handy overview of current research activities Hence the book should be equally useful to the senior resercher as well as the colleague just entering the field Keypoints treated are i integrable systems in multidimensions and associated phenomenology dromions ii criteria and tests of integrability e g Painlevé test iii new developments related to the scattering transform iv algebraic approaches to integrable systems and Hamiltonian theory e g connections with Young Baxter equations and Kac Moody algebras v new developments in mappings and cellular automata vi applications to general relativity condensed matter physics and oceanography *Nonlinear Evolution Equations And Their Applications - Proceedings Of The Luso-chinese Symposium* Tatsien Li,Long-wei Ling,Jose Francisco Rodrigues,1999-08-31 This book discusses recent trends and developments in the area of nonlinear evolution equations It is a collection of invited lectures on the following topics nonlinear parabolic equations systems nonlinear hyperbolic systems free boundary problems conservation laws and shock waves travelling and solitary waves regularity stability and singularity etc *Statics and Dynamics of Nonlinear Systems* Giorgio Benedek,H. Bilz,R. Zeyher,2012-12-06 The investigation of the properties of nonlinear systems is one of the fast deve loping areas of physics In condensed matter physics this terra incognita is approached from various starting points such as phase transitions and renormali zation group theory nonlinear models statistical mechanics and others The study of the mutual interrelations of these disciplines is important in developing uni fying methods and models towards a better understanding of nonlinear systems The present book collects the lectures and seminars delivered at the workshop on Statics and Dynamics of Nonlinear Systems held at the Centre for SCientific Culture Ettore Majorana in Erice Italy July 1 to 11 1983 in the framework of the International School of Materials Science and Technology Experts and young researchers came together to discuss nonlinear phenomena in condensed matter physics The book is divided into five parts each part containing a few general artic les introducing the subject followed by related specialized papers The first part deals with basic properties of nonlinear systems

including an introduction to the general theoretical methods Contributions to the nonlinear aspects of phase transitions are collected in the second part In the third part properties of incommensurate systems are discussed Here competing interactions lead to charge density waves soliton lattices and other complex structures Another point of special interest illustrated in the fourth part is the chaotic behavior of various systems such as Josephson junctions and discrete lattices

Effective Evolution Equations from Quantum Dynamics Niels Benedikter, Marcello Porta, Benjamin Schlein, 2015-11-04 These notes investigate the time evolution of quantum systems and in particular the rigorous derivation of effective equations approximating the many body Schrödinger dynamics in certain physically interesting regimes The focus is primarily on the derivation of time dependent effective theories non equilibrium question approximating many body quantum dynamics The book is divided into seven sections the first of which briefly reviews the main properties of many body quantum systems and their time evolution Section 2 introduces the mean field regime for bosonic systems and explains how the many body dynamics can be approximated in this limit using the Hartree equation Section 3 presents a method based on the use of coherent states for rigorously proving the convergence towards the Hartree dynamics while the fluctuations around the Hartree equation are considered in Section 4 Section 5 focuses on a discussion of a more subtle regime in which the many body evolution can be approximated by means of the nonlinear Gross Pitaevskii equation Section 6 addresses fermionic systems characterized by antisymmetric wave functions here the fermionic mean field regime is naturally linked with a semiclassical regime and it is proven that the evolution of approximate Slater determinants can be approximated using the nonlinear Hartree Fock equation In closing Section 7 reexamines the same fermionic mean field regime but with a focus on mixed quasi free initial data approximating
