## **Nonlinear Stochastic Problems:**

**Nonlinear Stochastic Problems** Richard Snowden Bucy, José M. F. Moura, 1983      **Nonlinear Stochastic Evolution Problems in Applied Sciences** N. Bellomo, Zdzislaw Brzezniak, L.M. de Socio, 2012-12-06 This volume deals with the analysis of nonlinear evolution problems described by partial differential equations having random or stochastic parameters. The emphasis throughout is on the actual determination of solutions rather than on proving the existence of solutions although mathematical proofs are given when this is necessary from an applications point of view. The content is divided into six chapters. Chapter 1 gives a general presentation of mathematical models in continuum mechanics and a description of the way in which problems are formulated. Chapter 2 deals with the problem of the evolution of an unconstrained system having random space dependent initial conditions but which is governed by a deterministic evolution equation. Chapter 3 deals with the initial boundary value problem for equations with random initial and boundary conditions as well as with random parameters where the randomness is modelled by stochastic separable processes. Chapter 4 is devoted to the initial boundary value problem for models with additional noise which obey Ito type partial differential equations. Chapter 5 is essentially devoted to the qualitative and quantitative analysis of the chaotic behaviour of systems in continuum physics. Chapter 6 provides indications on the solution of ill posed and inverse problems of stochastic type and suggests guidelines for future research. The volume concludes with an Appendix which gives a brief presentation of the theory of stochastic processes. Examples, applications and case studies are given throughout the book and range from those involving simple stochasticity to stochastic ill posed problems. For applied mathematicians, engineers and physicists whose work involves solving stochastic problems.

*Nonlinear Stochastic Control and Filtering with Engineering-oriented Complexities* Guoliang Wei, Zidong Wang, Wei Qian, 2016-09-15 *Nonlinear Stochastic Control and Filtering with Engineering oriented Complexities* presents a series of control and filtering approaches for stochastic systems with traditional and emerging engineering oriented complexities. The book begins with an overview of the relevant background, motivation and research problems and then discusses the robust stability and stabilization problems for a class of stochastic time delay interval systems with nonlinear disturbances. Investigates the robust stabilization and H control problems for a class of stochastic time delay uncertain systems with Markovian switching and nonlinear disturbances. Explores the H state estimator and H output feedback controller design issues for stochastic time delay systems with nonlinear disturbances, sensor nonlinearities and Markovian jumping parameters. Analyzes the H performance for a general class of nonlinear stochastic systems with time delays where the addressed systems are described by general stochastic functional differential equations. Studies the filtering problem for a class of discrete time stochastic nonlinear time delay systems with missing measurement and stochastic disturbances. Uses gain scheduling techniques to tackle the probability dependent control and filtering problems for time varying nonlinear systems with incomplete information. Evaluates the filtering problem for a class of discrete time stochastic nonlinear
