Nonlinear Diffusion Equations and Their Equilibrium States II W.-M. Ni, L.A. Peletier, James Serrin, 2012-12-06 In recent years considerable interest has been focused on nonlinear diffusion problems the archetypical equation for these being $U_t = U \Delta u + f(u)$ Here Δ denotes the n dimensional Laplacian the solution $u(x,t)$ is defined over some space time domain of the form $[0, \infty) \times \Omega$ and $f(u)$ is a given real function whose form is determined by various physical and mathematical applications These applications have become more varied and widespread as problem after problem has been shown to lead to an equation of this type or to its time independent counterpart the elliptic equation of equilibrium $U \Delta u + f(u) = 0$ Particular cases arise for example in population genetics the physics of nuclear stability phase transitions between liquids and gases flows in porous media the Lend Emden equation of astrophysics various simplified combustion models and in determining metrics which realize given scalar or Gaussian curvatures In the latter direction for example the problem of finding conformal metrics with prescribed curvature leads to a ground state problem involving critical exponents Thus not only analysts but geometers as well can find common ground in the present work The corresponding mathematical problem is to determine how the structure of the nonlinear function $f(u)$ influences the behavior of the solution

Commutative Algebra Melvin Hochster, Craig Huneke, Judith D. Sally, 2012-12-06 During late June and early July of 1987 a three week program dubbed microprogram in Commutative Algebra was held at the Mathematical Sciences Research Institute at Berkeley The intent of the microprogram was to survey recent major results and current trends in the theory of commutative rings especially commutative Noetherian rings There was enthusiastic international participation The papers in this volume some of which are expository some strictly research and some a combination reflect the intent of the program They give a cross section of what is happening now in this area Nearly all of the manuscripts were solicited from the speakers at the conference and in most instances the manuscript is based on the conference lecture The editors hope that they will be of interest and of use both to experts and neophytes in the field The editors would like to express their appreciation to the director of MSRI Professor Irving Kaplansky who first suggested the possibility of such a conference and made the task of organization painless We would also like to thank the IVISRI staff who were unfailingly efficient pleasant and helpful during the meeting and the manager of MSRI Arlene Baxter for her help with this volume Finally we would like to express our appreciation to David Mostardi who did much of the typing and put the electronic pieces together

Algebraic Topology and Its Applications Gunnar E. Carlsson, Ralph L. Cohen, Wu-Chung Hsiang, John D.S. Jones, 2012-12-06 In 1989 90 the Mathematical Sciences Research Institute conducted a program on Algebraic Topology and its Applications The main areas of concentration were homotopy theory K theory and applications to geometric topology gauge theory and moduli spaces Workshops were conducted in these three areas This volume consists of invited expository articles on the topics studied during this program They describe recent advances and point to possible new directions They should prove to be useful references for researchers in Algebraic Topology and related fields as well as to graduate students

Flavors of Geometry Silvio Levy, 1997-09-28 Flavors of Geometry is a volume of lectures on four geometrically influenced fields of mathematics that have experienced great development in recent years Growing out of a series of introductory lectures given at the Mathematical Sciences Research Institute in January 1995 and January 1996 the book presents chapters by masters in their respective fields on hyperbolic geometry dynamics in several complex variables convex geometry and volume estimation Each lecture begins with a discussion of elementary concepts examines the highlights of the field and concludes with a look at more advanced material The style and presentation of the chapters are clear and accessible and most of the lectures are richly illustrated Bibliographies and indexes are included to encourage further reading on the topics discussed

Degenerate Diffusions Wei-Ming Ni, L.A. Peletier, J.L. Vazquez, 2012-12-06 This IMA Volume in Mathematics and its Applications DEGENERATE DIFFUSIONS is based on the proceedings of a workshop

which was an integral part of the 1990-91 IMA program on Phase Transitions and Free Boundaries. The aim of this workshop was to provide some focus in the study of degenerate diffusion equations and by involving scientists and engineers as well as mathematicians to keep this focus firmly linked to concrete problems. We thank Wei Ming Ni, L. A. Peletier and J. L. Vazquez for organizing the meeting. We especially thank Wei Ming Ni for editing the proceedings. We also take this opportunity to thank those agencies whose financial support made the workshop possible: the Army Research Office, the National Science Foundation and the Office of Naval Research. Avner Friedman, Willard Miller Jr.

PREFACE

This volume is the proceedings of the IMA workshop Degenerate Diffusions held at the University of Minnesota from May 13 to May 18, 1991.
