

An overview of nonlinear dynamics

Fundamental concepts

- ▶ System may be defined as an orderly working totality, a set of units combined by nature, by science, or by art to form a whole.
- ▶ System is not just a set of elements but includes also interactions between both the system's elements and with the 'external world'.
- ▶ Interactions may be static or dynamic i.e. through an exchange of mass, energy, electric charge or through exchange of information
- ▶ A living organism is an open system, supplied with free energy from biochemical reactions. There are also effects of *information interactions*.
- ▶ In physics state of a system in a given moment of time is characterized by values of state variables (at this moment).
- ▶ The minimum number of independent state variables that are necessary to characterize the system's state is called the number of *degrees of freedom* of the system. If a system has n degrees of freedom then any state of the system may be characterized by a point in an n -dimensional space with appropriately defined coordinates, called the system's *phase space*

Nonlinear Dynamics And Fundamental Interactions:

Non-Linear Dynamics and Fundamental Interactions Faqir Khanna, Davron Matrasulov, 2005-12-01 This volume contains the papers presented at the NATO Advanced Research Institute on Non Linear Dynamics and Fundamental Interactions held in Tashkent Uzbekistan from Oct 10 16 2004 The main objective of the Workshop was to bring together people working in areas of Fundamental physics relating to Quantum Field Theory Finite Temperature Field theory and their applications to problems in particle physics phase transitions and overlap regions with the areas of Quantum Chaos The other important area is related to aspects of Non Linear Dynamics which has been considered with the topic of chaology The applications of such techniques are to mesoscopic systems nanostructures quantum information particle physics and cosmology All this forms a very rich area to review critically and then find aspects that still need careful consideration with possible new developments to find appropriate solutions There were 29 one hour talks and a total of seven half hour talks mostly by the students In addition two round table discussions were organised to bring the important topics that still need careful consideration One was devoted to questions and unsolved problems in Chaos in particular Quantum Chaos The other round table discussion considered the outstanding problems in Fundamental Interactions There were extensive discussions during the two hours devoted to each area Applications and development of new and diverse techniques was the real focus of these discussions The conference was ably organised by the local committee consisting of D U

Coopertive Research Associateships Tenable at the Naval Research Laboratory, Washington, 1997 *Metaphysics and Science* Stephen Mumford, Matthew Tugby, 2013-06-27 Metaphysics and Science brings together important new work within an emerging philosophical discipline the metaphysics of science In the opening chapter a definition of the metaphysics of science is offered one which explains why the topics of laws causation natural kinds and emergence are at the discipline s heart The book is then divided into four sections which group together papers from leading academics on each of those four topics Among the questions discussed are How are laws and measurement methods related Can a satisfactory reductive account of laws be given How can Lorentz transformation laws be explained How are dispositions triggered What role should dispositional properties play in our understanding of causation Are natural kinds and natural properties distinct How is the Kripke Putnam semantics for natural kind terms related to the natural kind essentialist thesis What would have to be the case for natural kind terms to have determinate reference What bearing if any does nonlinearity in science have on the issue of metaphysical emergence This collection will be of interest to philosophers scientists and post graduates working on problems at the intersection of metaphysics and science
