Nonlinear Hyperbolic Problems:

Nonlinear Hyperbolic Problems Claude Carasso,Pierre-Arnaud Raviart,Denis Serre,2006-11-15 The field of nonlinear hyperbolic problems has been expanding very fast over the past few years and has applications actual and potential in aerodynamics multifluid flows combustion detonics amongst other The difficulties that arise in application are of theoretical as well as numerical nature In fact the papers in this volume of proceedings deal to a greater extent with theoretical problems emerging in the resolution of nonlinear hyperbolic systems than with numerical methods The volume provides an excellent up to date review of the current research trends in this area

Hyperbolic Problems Michael Beals,2012-12-06 This book developed from a series of lectures I gave at the Symposium on Nonlinear Microlocal Analysis held at Nanjing University in October 1988 Its purpose is to give an overview of the use of microlocal analysis and commutators in the study of solutions to nonlinear wave equations The weak singularities in the solutions to such equations behave up to a certain extent like those present in the linear case they propagate along the null bicharacteristics of the operator On the other hand examples exhibiting singularities not present in the linear case can also be constructed I have tried to present a crossection of both the regularity results and the singular examples for problems on the interior of a domain and on domains with boundary The main emphasis is on the case of more than one space dimension since that case is treated in great detail in the paper of Rauch Reed 159 The results presented here have for the most part appeared elsewhere and are the work of many authors but a few new examples and proofs are given I have attempted to indicate the essential ideas behind the arguments so that only some of the results are proved in full detail It is hoped that the central notions of the more technical proofs appearing in research papers will be illuminated by these simpler cases

Ballmann,Rolf Jeltsch,2013-03-08 On the occasion of the International Conference on Nonlinear Hyperbolic Problems held in St Etienne France 1986 it was decided to start a two years cycle of conferences on this very rapidly expanding branch of

mathematics and its applications in Continuum Mechanics and Aerodynamics The second conference took place in Aachen FRG March 14 18 1988 The number of more than 200 participants from more than 20 countries all over the world and about

100 invited and contributed papers well balanced between theory numerical analysis and applications do not leave any doubt that it was the right decision to start this cycle of conferences of which the third will be organized in Sweden in 1990 This

volume contains sixty eight original papers presented at the conference twenty two of them dealing with the mathematical

theory e g existence uniqueness stability behaviour of solutions physical modelling by evolution equations Twenty two articles in numerical analysis are concerned with stability and convergence to the physically relevant solutions such as schemes especially deviced for treating shoccls contact discontinuities and artificial boundaries Twenty four papers contain multidimensional computational applications to nonlinear waves in solids flow through porous media and compressible fluid flow including shoccls real gas effects multiphase phenomena chemical reactions etc The editors and organizers of the Second International Conference on Hyperbolic Problems would like to thank the Scientific Committee for the generous support of recommending invited lectures and selecting the contributed papers of the conference

Nonlinear Hyperbolic Problems: Theoretical, Applied, and Computational Aspects Andrea Donato,Francesco Oliveri,2013-03-08 **Some Problems on Nonlinear Hyperbolic Equations and Applications** Yuejun Peng,Bopeng Rao,2010 This volume is

composed of two parts Mathematical and Numerical Analysis for Strongly Nonlinear Plasma Models and Exact Controllability and Observability for Quasilinear Hyperbolic Systems and Applications It presents recent progress and results obtained in the domains related to both subjects without attaching much importance to the details of proofs but rather to difficulties encountered to open problems and possible ways to be exploited It will be very useful for promoting further study on some important problems in the future

D'Ancona,Sergio Spagnolo,1992 **Blowup for Nonlinear Hyperbolic Equations** Serge Alinhac,1995-04-07 Solutions to partial differential equations or systems often over specific time periods exhibit smooth behaviour Given sufficient time however they almost invariably undergo a brutal change in behaviour and this phenomenon has become known as blowup In this book the author provides an overview of what is known about this situation and discusses many of the open problems concerning it

Nonlinear Hyperbolic Problems Marco Cirinà,University of Wisconsin--Madison. Mathematics Research Center,WISCONSIN UNIV MADISON MATHEMATICS RESEARCH CENTER.,1969 The problems considered are the initial value and the mixed boundary problem for a system of quasi linear partial differential equations in two independent variables The main result is that under appropriate conditions the classical local solutions of these problems can be extended to sets of preassigned size Extensions of this type are useful in the control theory of hyperbolic equations Author **Some Problems on Nonlinear Hyperbolic Equations and Applications** Ta-Tsien Li; Yue-Jun Peng; Bo-Peng Rao, **Workshop on nonlinear hyperbolic problems** Rolf Leis,Reinhard Racke,Sonderforschungsbereich Nichtlineare Partielle Differentialgleichungen Bonn,Deutsche Forschungsgemeinschaft,1990 **Nonlinear Hyperbolic Problems** Andrea Donato,Francesco Oliveri (matematico.),1993 **Initial Value Problems for Nonlinear Hyperbolic Equations** Nikolaj Andreevič Lar'kin,1983

Numerical Methods for Hyperbolic Equations Elena Vázquez-Cendón, 2011-05-23 This volume contains the lecture notes of the Short Course on Numerical Methods for Hyperbolic Equations Faculty of Mathematics University of Santiago de Compostela Spain 24 July 2011 The course was organized in recognition of Prof Eleuterio Toro's contribution to education and training on numerical methods for partial differential equations and was organized prior to the International Conference on Numerical Methods for Hyperbolic Equations Theory and Applications which honours Professor Toro in the month of his 65th birthday These lecture notes on selected topics in numerical methods for hyperbolic equations are from renowned academics in both theoretical and applied fields and include contributions on Nonlinear hyperbolic conservation laws First order schemes for the Euler equations High order accuracy monotonicity and non linear methods High order schemes for multidimensional hyperbolic problems A numerical method for the simulation of turbulent mixing and its basis in mathematical theory Lectures Notes on Numerical Methods for Hyperbolic Equations is intended primarily for research students and post doctoral research fellows Some background knowledge on the basics of the theoretical aspects of the partial differential equations their physical meaning and discretization methods is assumed
