Olefin Metathesis and Polymerization Catalysts Yavuz Imamogammalı, Birgül Zümreogammalı-Karan, Allan J. Amass, 2012-12-06 Olefin metathesis reaction can be considered as one of the most successful organic reactions with many applications in the low molecular weight range and also in the polymer field The use of catalysts with their selective and effective transformation properties in olefin metathesis I polymerization systems is a growing interest There has been great effort and competition in developing active and commercially useful catalysts The main aim of this ASI was to gather several research

groups and also the people from industry to present existing knowledge and latest results in the field A wide range of topics through homogeneous and heterogeneous aspects have been considered Attention has been drawn to the metal carbene and metallacyclobutane complexes as active species the initiation mechanisms the stereochemistry and thermodynamics of these reactions New catalytic systems for the metathesis of alkenes and alkynes and for ring opening polymerization I block copolymerization reactions have been introduced Spectroscopic studies for the characterization of catalysts simulation studies explaining the function of chain carrier species and polymer degradation have also been covered A detailed industrial report concerning the patents and applications in olefin metathesis I cycloolefin polymerization area fabrication and derivation has been presented This volume contains the main lectures and seminars given at the NATO Advanced Study Institute on Olefin Metathesis and Polymerization Catalysts Synthesis Mechanism and Utilization held at Akcay Babkesir Turkey between 10th and 22nd September 1989 **Olefin Metathesis** Kenneth John Ivin, 1983 *Olefin Metathesis and Polymerization Catalysts* Yavuz Imamogammal, Birgül Zümreogammal-Karan, Allan J. N-Heterocyclic Carbenes in Transition Metal Catalysis and Organocatalysis Catherine S.J. Cazin, 2010-10-04 N-Heterocyclic Carbenes in Transition Metal Catalysis and Organocatalysis features all catalytic reactions enabled by N-heterocyclic carbenes NHCs either directly as organocatalysts or as ligands for transition metal catalysts An explosion in the

use of NHCs has been reported in the literature during the past seven years making this comprehensive overview highly apropos. The book begins with an introductory overview of NHCs which could have been subtitled all you need to know about NHCs. The main body of the book is dedicated to applications of NHCs in catalysis. In addition to the success stories of NHCs in metathesis, NHCs in cross coupling and more recently NHCs in organocatalysis, all other less publicized areas are also covered. As the success of NHCs is generally attributed to their potential to stabilize metal centres, the inclusion of a chapter on the decomposition of NHC catalysts is pertinent. The book closes with a chapter describing the applications of NHCs in industrial processes which is the first coverage of its kind and brings a unique industrial context to this book. Included in this book: Historical aspects of NHCs; Synthetic pathways to NHC precursors; free NHCs and complexes; Methods of characterisation of NHCs and related complexes; Electronic properties of NHCs; Steric properties of NHCs and models for their description; NHCs for metathesis and cross coupling reactions; NHCs as organocatalysts; NHC Transition Metal mediated oxidations; additions to multiple bonds; polymerisation and oligomerisation; cyclisations; direct arylations; reactions involving CO, C F and C H bond activation; Decomposition of NHC containing catalysts; Industrial applications involving NHC containing catalysts; N Heterocyclic Carbenes in Transition Metal Catalysis and Organocatalysis.

N Heterocyclic Carbenes in Transition Metal Catalysis and Organocatalysis provides a fresh view of NHCs since most contributors are young emerging researchers in the field of homogeneous catalysis using NHCs. This group of contributors is complemented by highly established academic researchers and an industrialist. This book is comprehensive from the basic features of NHCs to the latest advances, hence it is suitable for both the novice and the expert.
