

The background of the entire page is a photograph of a lush, green forest floor. The scene is filled with moss-covered ground, fallen tree branches, and the lower trunks of trees. Sunlight filters through the canopy, creating dappled light on the forest floor. The overall color palette is dominated by various shades of green and brown.

Merle Peterson, Patrick Martin, 1997-08-01 Sitka spruce the largest of the world's spruces is an important component of British Columbia's coastal forests Its ecology gives it a special place in the sustainable management of the

province's forests. However, in west coast forestry it is poorly known in comparison with its main coniferous companions: Douglas fir, western redcedar, and western hemlock. As an important international forestry resource, it is crucial that Sitka spruce's ecology and the ecosystems in which it occurs be clearly understood by those who are involved with its management. This book is the most recent major work on the ecology and management of Sitka spruce. The authors describe how this fascinating tree reproduces, grows, and functions in its natural geographic range. They discuss both the ecology of Sitka spruce and silvicultural questions such as original plantation spacing, juvenile spacing, and fertilization to accelerate the harvestability of second growth coastal spruce stands. Sitka spruce derives its importance not only from its prominence as an international transportable genetic resource but also from its role in riparian systems and its biodiversity values. Here in North America's west coast rainforest, this magnificent tree illustrates the ecology of complex forest ecosystems and their cultural, wilderness, historic, and economic values.

**The Nature of Southeast Alaska** Richard Carstensen, Bob

Armstrong, Rita M. O'Clair, 2014-03-03 Unlike the standard nature guides that explain how to recognize common animals, Nature stresses the web of interrelationships that link the regional flora and fauna. This affectionate examination of some of North America's most spectacular surviving old growth forests will delight backpackers and armchair naturalists. Los Angeles Times Book Review Everything you ever wanted to know about the flora and fauna of Southeast Alaska is contained in the third edition of this lively field guide to the natural world, from bears to banana slugs, mountains to murrelets. The authors, who are both Alaskan residents and biologists, combine scientific research with personal experiences to make a definitive field guide for residents or visitors to Southeast Alaska. The unique features of the book include in-depth information about how wildlife coexists with the environment; detailed discussions of mammals, birds, fish, invertebrates, fungi, and plants; a detailed map of wilderness areas in Southeast Alaska; more than 200 black and white illustrations; a bibliography list of common and scientific names; and an index. New to this edition: more than 100 new illustrations, many never before published; as well as new maps and photos. Major expansion of sections on geology, old growth forests, marine mammals, and amphibians. Fifty-two new sidebars, written in the first person, to give the text a more personal touch that describe recent findings or experiences. Sweeping updates and elaborations to chapter narratives, often thanks to technology unknown in 1992. In-depth guide to Southeast Alaska's flora and fauna, more than an identification manual. Nature explores how the species and habitats encountered in the woods and waters of Southeast Alaska fit into the bigger picture.

**Rainforest Organizations** Steve Shipp, 1997 Rainforests home to more than half of all plant and animal species on earth while covering less than six percent of the world's land area, have intricate ecosystems with multitudes of animal and plant species, including humans. Yet deforestation of the rainforests has greatly increased in the past half century. Ten thousand years ago rainforests covered an estimated 9.5 million square miles, but as millions of trees are

lost daily to agricultural and commercial development scientific studies project the reduction of rainforests to six million square miles by the year 2000 and 3 5 million square miles by 2050 Numerous scientific political conservationist public information and other organizations have been formed to address every aspect of rainforests over 120 worldwide can be found in this directory Each entry lists the address phone number contact person e mail or Internet address if available mission statement or goals publications and often the group s history and current projects All listed agencies and organizations readily accept queries for information about rainforests and most invite participation in their activities and projects     Forest Watch ,1992     **Forest Giants of the Pacific Coast** Robert Van Pelt,2001     *Biology Digest* ,1992-11
