**Analyzing Crime Patterns** Victor Goldsmith, Philip G. McGuire, John B. Mollenkopf, Timothy A. Ross, 1999-11-18 Crime control continues to be a growth industry despite the drop in crime indicators throughout the nation. This volume shows how state of the art geographic information systems GIS are revolutionizing urban law enforcement with an award winning program in New York City leading the way. Electronic pin mapping is used to display the incidence of crime to stimulate effective strategies and decision making and to evaluate the impact of recent activity applied to hotspots. The expert information presented by 12 contributors will guide departments without such tools to understand the latest technologies and successfully employ them. Besides describing and assessing cutting edge techniques of crime mapping this book emphasizes the organizational and intellectual contexts in which spatial analysis of crime takes place. The technical problems of defining, measuring, interpreting and predicting spatial concentrations of crime, the common use of New York City crime data and practical applications of what is known e.g. a review of mapping and analysis software packages using the same data set. Students, academics, researchers, practitioners and policymakers in the areas of criminal justice, corrections, geography, social problems, law and government, public administration and public policy analysis will need to look at the interdisciplinary nature of both GIS and spatial dimensions of crime in order to comprehend the variety of different approaches, address important analytic problems, reassess public facilities and resources and prepare to respond more quickly to emerging hotspots.

law enforcement     **The Criminology of Edwin Sutherland** John F. Galliher, 1988-01-01 Edwin Sutherland is the acknowledged father of American criminology. This is the first full length analysis of his work and his person. Unlike the European schools of criminology which sought to locate deviant behavior within the deep structures of the economy, Sutherland eschewed such explanations in favor of proximate and observable causes. He located the sources of crime in the association and interaction of specific groups of people. For Sutherland, crime as a way of life results from an individual's attachment to criminals for whom criminal acts are a measure of success no less than a way of life. In a series of publications, Sutherland expanded the horizons of the classic Chicago School of interactionists and in the process founded criminology as a separate area of research while locating it firmly within sociology. As the authors show, Sutherland's work was inspired by strong moral concerns and a sense of the needs of society for social order without falling prey to either blaming the victim or pandering to sentiment about the joys of criminal life. In this sense he is a model of the sociological tradition long deserving of the biography acknowledging his role as a master and pioneer. Yet Gaylord and Galliher have written more than an intellectual biography. They take seriously the need to fit Sutherland and his theory of differential association into a social and historical context. They are also aware and critically straightforward about the limitations of Sutherland's work in criminology but place both his achievements and their limitations in a fully developed analytical context.

**Applied Crime Analysis** Wayne Petherick, 2014-06-12 Most approaches to crime analysis focus on geographical crime mapping which is helpful in identifying crime clusters and allocating police resources but does not explain why a particular crime took place. Applied Crime Analysis presents a model that brings statistical anchoring, behavioral psychopathology and victimology from the social sciences together with physical and crime scene evidence to provide a complete picture of crime. This hands on guide takes theoretical principles and demonstrates how they can be put into practice using real case examples. In addition to covering key topics such as staged crime scenes, false reports and criminal motivations, the book's includes a final chapter on report writing showing readers how to use their findings to successfully advance to prosecution and succeed in court. Presents a model that takes social science concepts including statistical anchoring, behavioral psychopathology and victimology and connects them with crime scene evidence to examine and analyze crime. Puts crime analysis theory into practice with real world examples highlighting important concepts and best practice. Includes a report writing chapter to demonstrate how this approach can strengthen criminal cases and succeed in court. Instructor materials include a Test Bank, Powerpoint lecture slides and Instructor's Guide for each chapter.
