**Human Ecology** Amos H. Hawley, 1986-11-15 Human Ecology A Theoretical Essay by Amos Hawley presents for the first time a unified theory of human ecology by a scholar whose name is virtually synonymous with the discipline Focused on the interaction between society and environment human ecology is an attempt to deal holistically with the phenomenon of human organization Beginning in the first quarter of the century sociologists such as Park Burgess and McKenzie developed the study of human ecology to account for the dynamics of change in American cities Over time theorists have reached beyond the boundaries of sociology drawing on the findings of economics political science anthropology and bioecology to understand the relationship of human beings to their environment Hawley has successfully integrated the scattered theses of this wide ranging discipline into a schematic whole The early human ecologists seized on the analogy of plant communities as a way of understanding urban communities Hawley here maintains that the most important contribution to human ecology of the lexicons of plant and animal ecologies is the perspective of collective life as an adaptive process consisting in an interaction of environment population and organization From the adaptive process he argues emerges the ecosystem a concept that serves as a common denominator for bioecology and human ecology Hawley has codified the theory of human ecology by a set of deductive hypotheses that establish its claims to coherence and comprehensiveness His model charts a synthesis of ecological concepts ranging from adaptation and equilibrium through growth in temporal and spatial dimensions to convergence and openness The essay underscores the critical importance of transportation and communication technology to the shaping of the human ecological system Human Ecology brings concision and elegance to this holistic perspective and

will serve as a point of reference and orientation for anyone interested in the powers and scope of the ecological approach

**Human Ecology** Daniel G. Bates, Judith Tucker, 2010-03-29 This book arose from the need to develop accessible research based case study material which addresses contemporary issues and problems in the rapidly evolving field of human ecology. Academic political and indeed public interest in the environmental sciences is on the rise. This is no doubt spurred by media coverage of climate change and global warming and attendant natural disasters such as unusual drought and flood conditions, toxic dust storms, pollution of air and water and the like. But there is also a growing intellectual awareness of the social causes of anthropogenic environmental impacts, political vectors in determining conservation outcomes and the role of local representations of ecological knowledge in resource management and sustainable yield production. This is reflected in the rapid increase of ecology courses being taught at leading universities in the developing countries much as was the case a decade or two ago in Europe and North America. The research presented here is all taken from recent issues of *Human Ecology: An Interdisciplinary Journal*. Since the journal itself is a leading forum for contemporary research the articles we have selected represent a cross section of work which brings the perspectives of human ecology to bear on current problems being faced around the world. The chapters are organized in such a way to facilitate the use of this volume either to teach a course or to introduce an informed reader to the field.

**Human Ecology** Frederick R. Steiner, 2016-02-16 Humans have always been influenced by natural landscapes and always will be even as we create ever larger cities and our developments fundamentally change the nature of the earth around us. In *Human Ecology* noted city planner and landscape architect Frederick Steiner encourages us to consider how human cultures have been shaped by natural forces and how we might use this understanding to contribute to a future where both nature and people thrive. Human ecology is the study of the interrelationships between humans and their environment drawing on diverse fields from biology and geography to sociology, engineering and architecture. Steiner admirably synthesizes these perspectives through the lens of landscape architecture, a discipline that requires its practitioners to consciously connect humans and their environments. After laying out eight principles for understanding human ecology the book's chapters build from the smallest scale of connection our homes and expand to community scales, regions, nations and ultimately examine global relationships between people and nature. In this age of climate change a new approach to planning and design is required to envision a livable future. *Human Ecology* provides architects, landscape architects, urban designers and planners and students in those fields with timeless principles for new creative thinking about how their work can shape a vibrant, resilient future for ourselves and our planet.
