Optimisation In Economic Analysis:

Optimisation in Economic Analysis Gordon Mills, 2003 One of the fundamental economic problems is one of making the best use of limited resources As a result mathematical optimisation methods play a crucial role in economic theory Covering the use of such methods in applied and policy contexts this book deals not only with the main techniques linear programming nonlinear optimisation and dynamic programming but also emphasizes the art of model building and discusses fields such as optimisation over time Mathematical Optimization and Economic Analysis Mikuláš Luptácik, 2009-10-03 Mathematical Optimization and Economic Analysis is a self contained introduction to various optimization techniques used in economic modeling and analysis such as geometric linear and convex programming and data envelopment analysis Through a systematic approach this book demonstrates the usefulness of these mathematical tools in quantitative and qualitative economic analysis The book presents specific examples to demonstrate each technique s advantages and applicability as well as numerous applications of these techniques to industrial economics regulatory economics trade policy economic sustainability production planning and environmental policy Key Features include A detailed presentation of both single objective and multiobjective optimization An in depth exposition of various applied optimization problems Implementation of optimization tools to improve the accuracy of various economic models Extensive resources suggested for further reading This book is intended for graduate and postgraduate students studying quantitative economics as well as economics researchers and applied mathematicians Requirements include a basic knowledge of calculus and linear algebra and a familiarity with economic modeling Optimization and Stability Theory for Economic Analysis Brian Beavis, Ian M. Dobbs, 1990 This book presents a coherent and systematic exposition of the mathematical theory of the problems of optimization and stability Both of these are topics central to economic analysis since the latter is so much concerned with the optimizing behaviour of economic agents and the stability of the interaction processes to which this gives rise The topics covered include convexity mathematical programming fixed point theorems comparative static analysis and duality the stability of dynamic systems the calculus of variations and optimal control theory The authors present a more detailed and wide ranging discussion of these topics than is to be found in the few books which attempt a similar coverage Although the text deals with fairly advanced material the mathematical prerequisites are minimised by the inclusion of an integrated mathematical review designed to make the text self contained and accessible to the reader with only an elementary knowledge of calculus and linear algebra A novel feature of the book is that it provides the reader with an understanding and feel for the kinds of mathematical techniques most useful for dealing with particular economic problems This is achieved through an extensive use of a broad range of economic examples rather than the numerical algebraic examples so often found This is suitable for use in advanced undergraduate and postgraduate courses in economic analysis and should in addition prove a useful reference work for practising economists Mathematical Optimization and Economic Analysis

Mikuláš Luptáčík, Klaus Prettner, 2025-12-21 This book offers a comprehensive exploration of mathematical optimization and its critical role in economic analysis As the scarcity of resources environmental degradation and the effects of industrial robots and artificial intelligence AI become ever pressing issues this second edition expands on the foundational theories of static optimization to include dynamic optimization and new applications in areas such as automation and sustainability The authors examine key concepts such as the optimal allocation of resources the interplay between economic growth and environmental impacts and the integration of automation in production systems As renowned experts in the field the authors provide a robust framework for understanding single and multi objective optimization models as well as dynamic optimization in continuous and discrete time emphasizing their use in qualitative analysis This second edition offers deep insights into investment strategies and resource management over time making it an indispensable resource for those seeking to navigate the complexities of modern economic landscapes Ideal for graduate students university educators and researchers in economics business and operations research this book bridges the gap between theoretical rigor and practical application It is also a valuable resource for practitioners and students of applied mathematics interested in economic applications

Optimisation and Stability Theory for Economic Analysis Brian Beavis, Ian Dobbs, 1990-02-22 This text presents a coherent and systematic exposition of the mathematical theory of the problems of optimization and stability both of which are central to economic analysis Through extensive use of economic examples the authors provide the economist with a feel for the kinds of mathematical techniques most useful for dealing with particular economic problems Although the text deals with fairly advanced material the mathematical prerequisites are minimized by the inclusion of an integrated mathematical review designed to make the text self contained and accessible to the reader with only an elementary knowledge of calculus and linear algebra

Fox, 1969 Economic policy and operations research Methods of linear programming extension and applications Nonlinear and dynamic programming Sensitivity analysis in programming Probabilistic programming methods Models of firm behavior and other applications Models of resource allocation and planning in educational institutions and systems Models of decomposition or decentralization in firm behavior and economic policy Operations research and complex social systems

Mathematical Analysis and Optimization for Economists Michael J. Panik, 2021-09-30 In Mathematical Analysis and Optimization for Economists the author aims to introduce students of economics to the power and versatility of traditional as well as contemporary methodologies in mathematics and optimization theory and illustrates how these techniques can be applied in solving microeconomic problems This book combines the areas of intermediate to advanced mathematics optimization and microeconomic decision making and is suitable for advanced undergraduates and first year graduate students This text is highly readable with all concepts fully defined and contains numerous detailed example problems in both mathematics and microeconomic applications Each section contains some standard as well as more thoughtful and challenging exercises

Solutions can be downloaded from the CRC Press website All solutions are detailed and complete Features Contains a whole spectrum of modern applicable mathematical techniques many of which are not found in other books of this type Comprehensive and contains numerous and detailed example problems in both mathematics and economic analysis Suitable for economists and economics students with only a minimal mathematical background Classroom tested over the years when the author was actively teaching at the University of Hartford Serves as a beginner text in optimization for applied mathematics students Accompanied by several electronic chapters on linear algebra and matrix theory nonsmooth optimization economic efficiency and distance functions available for free on www.routledge.com 9780367759018

Optimization, Dynamics, and Economic Analysis Engelbert J. Dockner, Richard F. Hartl, Mikulas Luptacik, Gerhard Sorger, 2012-12-06 This book includes a collection of articles that present recent developments in the fields of optimization and dynamic game theory economic dynamics dynamic theory of the firm and population dynamics and non standard applications of optimal control theory The authors of the articles are well respected authorities in their fields and are known for their high quality research in the fields of optimization and economic dynamics *Economic Analysis and Operations Research* Jati K. Sengupta, Karl A. Fox, 1975 **Economic Analysis and Operations Research: Optimization Techniques in Quantitative Economic Models** Jati K. SENGUPTA (and FOX (Karl August)), 1969 Textbook on mathematics methodology in operational research and scientific management includes econometrics and simulation models and covers input output analysis decision making educational planning investment planning economic policy and decentralization etc References **Optimization in Economic Analysis** Gordon Mills, 1984 *Foundations of Dynamic Economic Analysis* Michael R. Caputo, 2005-01-17 *Foundations of Dynamic Economic Analysis* presents a modern and thorough exposition of the fundamental mathematical formalism used to study optimal control theory i.e continuous time dynamic economic processes and to interpret dynamic economic behavior The style of presentation with its continual emphasis on the economic interpretation of mathematics and models distinguishes it from several other excellent texts on the subject This approach is aided dramatically by introducing the dynamic envelope theorem and the method of comparative dynamics early in the exposition Accordingly motivated and economically revealing proofs of the transversality conditions come about by use of the dynamic envelope theorem Furthermore such sequencing of the material naturally leads to the development of the primal dual method of comparative dynamics and dynamic duality theory two modern approaches used to tease out the empirical content of optimal control models The stylistic approach ultimately draws attention to the empirical richness of optimal control theory a feature missing in virtually all other textbooks of this type **Optimization Techniques in Quantitative Economics** Jati K. Sengupta, Karl August Fox, 1975 *Functional Analysis, Optimization, and Mathematical Economics* Leonid Vital'evich Kantorovich, 1990 This is a collection of papers on the work of Leonid Kantorovich a Russian mathematician and economist and a leading contributor to the fields of optimization and mathematical economics

Kantorovich invented linear programming then applied this theory to optimal macroeconomic planning in a socialist economy for which he received the Nobel Prize The book is dedicated to the memory of Kantorovich who died in 1986 It contains original contributions from several researchers in the USSR never before available in the U S It is organized in a logical sequence from mathematics to the applications of the theories to concrete problems The work is fully illustrated
