Hernández,Alain J. Kassab,C. A. Brebbia,1999 In this text researchers from research centres and industry present current advances in structural optimization The 35 papers include the following topics shape and topology optimization optimal control advances in numerical optimization and emergent applications of design optimization High Performance and Optimum Design of Structures and Materials W. P. De Wilde,S. Hernández,C. A. Brebbia,2014-06-09 The use of novel materials and new structural concepts nowadays is not restricted to highly technical areas like aerospace aeronautical applications or the automotive industry but affects all engineering fields including those such as civil engineering and architecture Addressing issues involving advanced types of structures particularly those based on new concepts or new materials and their system design contributions highlight the latest developments in design optimisation manufacturing and experimentation Also included are contributions on new software numerical methods and different optimisation techniques Optimisation problems of interest involve those related to size shape and topology of structures and materials Most high performance structures require the development of a generation of new materials which can more easily resist a range of external stimuli or react in a non conventional manner Particular emphasis is placed on intelligent structures and materials as well as the application of computational methods for their modelling control and management Optimisation techniques have much to offer to those involved in the design of new industrial products The formulation of optimum design has evolved from the time it was purely an academic topic able now to satisfy the requirements of real life prototypes The development of new algorithms and the appearance of powerful commercial computer codes with easy to use graphical interfaces have created a fertile field for the incorporation of optimisation in the design process in all engineering disciplines This proceedings volume is the first from a new edition of the High Performance Design of Structures and Materials and the Optimum Design of Structures conferences which follows the success of a number of meetings that originated in 1989 Topics covered include Composite materials Material characterisation Experiments and numerical analysis Steel structures High performance concretes Natural fibre composites Transformable structures Lightweight structures Timber structures Environmentally friendly and sustainable structures Emerging structural applications Optimisation in civil engineering Evolutionary methods in optimisation Shape and topology optimisation Aerospace structures Structural optimisation Biomechanics application Material optimisation Life cost optimisation Intelligence structures and smart materials

Optimum Design of Steel Structures József Farkas,Károly Jármai,2013-03-29 This book helps designers and manufacturers to select and develop the most suitable and competitive steel structures which are safe fit for production and economic An optimum design system is used to find the best characteristics of structural models which guarantee the

fulfilment of design and fabrication requirements and minimize the cost function Realistic numerical models are used as main components of industrial steel structures Chapter 1 contains some experiences with the optimum design of steel structures Chapter 2 treats some newer mathematical optimization methods Chapter 3 gives formulae for fabrication times and costs Chapters 4 deals with beams and columns Summarizes the Eurocode rules for design Chapter 5 deals with the design of tubular trusses Chapter 6 gives the design of frame structures and fire resistant design rules for a frame In Chapters 7 some minimum cost design problems of stiffened and cellular plates and shells are worked out for cases of different stiffenings and loads Chapter 8 gives a cost comparison of cylindrical and conical shells The book contains a large collection of literatures and a subject list and a name index
