

Ordinal Loglinear Models

- Row and column effect model – one variable ordinal, one nominal
- Row effect model – row variable is nominal and column variable is ordinal, interactions are created by values of column variable instead of columns

(Example table 3x3: for two nominal variables 4 interaction parameters, for row effect model only 2)

- Uniform association- two ordinal variables, interaction is composed by multiplying values of these variables

(Example table 3x3: for two nominal variables 4 interaction parameters, for row effect model only 1)
