Le Prell, Donald Henderson, Richard R. Fay, Arthur N. Popper, 2011-10-30. Exposure to loud noise continues to be the largest cause of hearing loss in the adult population. The problem of NIHL impacts a number of disciplines. US standards for permissible noise exposure were originally published in 1968 and remain largely unchanged today. Indeed permissible noise exposure for US personnel is significantly greater than that allowed in numerous other countries including for example Canada China Brazil Mexico and the European Union. However there have been a number of discoveries and advances that have increased our understanding of the mechanisms of NIHL. These advances have the potential to impact how NIHL can be prevented and how our noise standards can be made more appropriate.
