Non-Hodgkin's Lymphomas Bruce D. Cheson, 2008

Non-Hodgkin's Lymphoma (NHL) is defined as any of a large group of cancers of the immune system. NHL's can occur at any age and patients are often marked by enlarged lymph nodes, fever, and weight loss. There are many different types of non-Hodgkin lymphoma which can be divided into aggressive fast growing and indolent slow growing types and can be classified as either B cell or T cell non-Hodgkin lymphoma. The guest editor has provided a thorough overview of this topic by having expert clinicians write about the diagnosis and management of follicular lymphomas, marginal zone lymphomas, B cell lymphomas, cutaneous T cell lymphomas, and peripheral T cell lymphomas. State of the art treatments are discussed including novel chemotherapeutic agents, new biological agents, and immunologic strategies.

The Management of Non-Hodgkin's Lymphomas in Europe Silvio Monfardini, 2012-12-06

The European School of Oncology came into existence to respond to a need for information, education, and training in the field of the diagnosis and treatment of cancer. There are two main reasons why such an initiative was considered necessary. Firstly, the teaching of oncology requires a rigorously multidisciplinary approach which is difficult for the Universities to put into practice since their system is mainly disciplinary orientated. Secondly, the rate of technological development that impinges on the diagnosis of cancer has been so rapid that it is not an easy task for medical faculties to adapt their curricula flexibly. With its residential courses for organ pathologies and its seminars on new techniques or on the principal therapeutic controversies, it is the ambition of the European School of Oncology to fill a cultural and scientific gap and thereby create a bridge between the University and Industry and between these two and daily medical practice. One of the more recent initiatives of the ESO is the Intercity Meetings. The concept of Intercity Meetings was first put forward with the idea of creating total coverage throughout Europe of certain tumours at the forefront of research and in some cases controversy.

Histopathology of Non-Hodgkin's Lymphomas Alfred C. Feller, K. Lennert, 2012-12-06

The 1st Edition of Histopathology of Non-Hodgkin's Lymphomas, written in collaboration with Professor H. Stein and published in 1981, was received well and is now out of print. In the meantime, there has been an explosion of data that not only have made the definitions of various entities more precise but above all have confirmed the main entities originally delineated in the Kiel classification. The development of monoclonal antibodies and molecular cytogenetics has also made it possible to identify T cell lymphomas more accurately. For example, many of the malignant lymphomas that were previously considered to be unclassifiable can now be included in a classification scheme that places the T cell lymphomas alongside of the list of B cell lymphomas. In 1988, the European Lymphoma Club published an updated Kiel classification (Stansfeld et al 1988) based on this new knowledge. It includes a number of previously undefined types of
