Nonlinear Optimization Complexity Issues:

Nonlinear Optimization Stephen A. Vavasis,1991 The fields of computer science and optimization greatly influence each other and this book is about one important connection between the two complexity theory Complexity theory underlies computer algorithms and is used to address such questions as the efficiency of algorithms and the possibility of algorithmic solutions for particular problems Furthermore as optimization problems increase in size with hardware capacity complexity theory plays a steadily growing role in the exploration of optimization algorithms As larger and more complicated problems are addressed it is more important than ever to understand the asymptotic complexity issues This book describes some of the key developments in the complexity aspects of optimization during the last decade It will be a valuable source of information for computer scientists and computational mathematicians **Tractability of Multivariate Problems: Standard information for functionals** Erich Novak,H. Woźniakowski,2008 This is the second volume of a three volume set comprising a comprehensive study of the tractability of multivariate problems The second volume deals with algorithms using standard information consisting of function values for the approximation of linear and selected nonlinear functionals An important example is numerical multivariate integration The proof techniques used in volumes I and II are quite different It is especially hard to establish meaningful lower error bounds for the approximation of functionals by using finitely many function values Here the concept of decomposable reproducing kernels is helpful allowing it to find matching lower and upper error bounds for some linear functionals It is then possible to conclude tractability results from such error bounds Tractability results even for linear functionals are very rich in variety There are infinite dimensional Hilbert spaces for which the approximation with an arbitrarily small error of all linear functionals requires only one function value There are Hilbert spaces for which all nontrivial linear functionals suffer from the curse of dimensionality This holds for unweighted spaces where the role of all variables and groups of variables is the same For weighted spaces one can monitor the role of all variables and groups of variables Necessary and sufficient conditions on the decay of the weights are given to obtain various notions of tractability The text contains extensive chapters on discrepancy and integration decomposable kernels and lower bounds the Smolyak sparse grid algorithms lattice rules and the CBC component by component algorithms This is done in various settings Path integration and quantum computation are also discussed This volume is of interest to researchers working in computational mathematics especially in approximation of high dimensional problems It is also well suited for graduate courses and seminars There are 61 open problems listed to stimulate future research in tractability *Special Volume: Foundations of Computational Mathematics* Phillipe G. Ciarlet,2003-05-30 From geometric integration and its applications and linear programming and condition numbers under the real number computational model to chaos in finite difference schemes these essays explore the foundational issues of computational mathematics **Experimental Algorithms** Paola Festa,2010-05-07 This volume constitutes the refereed proceedings of the 9th International Symposium on

Experimental Algorithms SEA 2010 held on Ischia Island Naples Italy in May 2010 The 40 revised full papers presented together with two invited papers were carefully reviewed and selected from 73 submissions The topics covered include algorithm engineering algorithmic libraries algorithmic mechanism design analysis of algorithms algorithms for memory hierarchies approximation techniques bioinformatics branch and bound algorithms combinatorial and irregular problems combinatorial structures and graphs communication networks complex networks computational geometry computational learning theory computational optimization computer systems cryptography and security data streams data structures distributed and parallel algorithms evaluation of algorithms for realistic environments experimental techniques and statistics graph drawing heuristics for combinatorial optimization **Geometry, Analysis And Mechanics** John Michael Rassias,1995-01-10 This review volume consists of articles by outstanding scientists who explore Archimedes influence on the development of mathematics particularly on Geometry Analysis and Mechanics **Bilevel Programming Problems** Stephan Dempe,Vyacheslav Kalashnikov,Gerardo A. Pérez-Valdés,Nataliya Kalashnykova,2015-01-28 This book describes recent theoretical findings relevant to bilevel programming in general and in mixed integer bilevel programming in particular It describes recent applications in energy problems such as the stochastic bilevel optimization approaches used in the natural gas industry New algorithms for solving linear and mixed integer bilevel programming problems are presented and explained

Brazil-Portugal Mathematics Miguel Abreu,Henrique Bursztyn,Jorge Picado,2025-09-26 This book collects the groundbreaking research presented at the plenary lectures of the First Brazil Portugal Joint Meeting in Mathematics held in Salvador Brazil from August 14 to 20 2022 This historic event marked the bicentennial of Brazil s independence and celebrated the strengthening of scientific cooperation between the two nations With contributions from international experts these proceedings provide a comprehensive overview of the latest advances in various areas of mathematics It contains a stimulating mix of research articles and exclusive surveys of the state of the art in current topics It collects 7 articles on various topics including transmission problems and PDEs linear and nonlinear fractional PDEs of interacting particle systems complexity in continuous optimization Poisson manifolds real and complex singularities Reeb flows and statistical extreme value theory It serves as a testament to the growing partnership between the Brazilian and Portuguese mathematical communities This volume will serve as a source of inspiration for a broad range of researchers and research students especially professional mathematicians with ties to Brazil and or Portugal State of the Art in Global Optimization Christodoulos A. Floudas,Panos M. Pardalos,1996-02-29 Papers from the April 1995 title conference held at Princeton University present current research on global optimization and related applications in science and engineering highlighting the use of new algorithms for solving large classes of problems in areas such as computational chemistry and biology structural optimization and operations research Topics include Lagrange duality in partly convex programming global optimization using hyperbolic cross points and adaptive control via non convex optimization Of interest to students and
