Nonlinear Spectroscopy For Molecular Structure Determination:

Nonlinear Spectroscopy for Molecular Structure Determination Robert W. Field, 1998 A large variety of nonlinear spectroscopic methods have so far been developed and applied to studies of molecular structure and dynamics Some of these methods utilize complex techniques making it difficult to understand the underlying principles Furthermore most of these methods are referred to by nicknames or acronyms which keeps them shrouded in mystery for most non specialists who are thereby discouraged from mastering and applying the methods to molecular systems Under these circumstances it was judged appropriate and timely to overview those nonlinear spectroscopic methods which are currently particularly useful for studies of molecular structure and dynamics Thus the Commission on Molecular Structure and Spectroscopy of the International Union of Pure and Applied Chemistry decided to publish a book intended to provide an introduction to nonlinear spectroscopy for non specialists

Trends and Perspectives in Modern Computational Science George Maroulis, Theodore Simos, 2006-10-27 This volume contains a collection of the lectures of the invited speakers and symposium organizers presented at the International Conference of Computational methods in Science and Engineering ICCMSE 2006 held in Chania Greece October 2006 The content of the papers bears upon new developments of Computational Science pertinent to Physics Chemistry Biology Medicine Mathematics and Engineering Molecular Science is a privileged ground for the application and evaluation of new mathematical tools and computational methods In recent years novelty and progress with greatest conceivable speed is common experience This flavor of research findings carrying many consequences for distant fields is easily evidenced in the lectures collected in this volume

Multidimensional Time-Resolved Spectroscopy Tiago Buckup, Jérémie Léonard, 2018-12-07 The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology medicine and materials science The goal of each thematic volume is to give the non specialist reader whether in academia or industry a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual concentrating on the methodological thinking that will allow the non specialist reader to understand the information presented Contributions also offer an outlook on potential future developments in the field
