Jannini,2020-01-27 The aim of this book is twofold to promote an awareness of cultural differences in connection with sexual medicine among health care providers and to demonstrate how such differences are relevant to the care and treatment of patients with sexual issues Individual sexuality represents the cumulative effects of biological psychological and cultural influences Yet much of the study of sexuality including issues ranging from sexual identity to sexual response has been conducted through a Western lens Although a substantial body of work in anthropology has taken up the study of human sexuality from a cross cultural perspective two points are notable First this work seldom crosses the desks of medical and psychological health practitioners and second the relevance of specific cultural differences is rarely apparent to the typical sexual health practitioner To address this situation this book adopts a global perspective focusing on how cultural practices and values can impact health care treatment and outcomes In this regard it covers three broad domains Sexual Identity and Orientation Sexual Response and Dysfunction and Sexual Diversity Each chapter consists of two parts a general description of the relevant issues and a discussion of how these issues can be relevant to clinical practice The book offers a valuable practical tool for specialists in sexual medicine and sexual psychology for sexual healthcare givers and for sexological researchers who want to better serve their patients by developing an awareness of and sensitivity to cultural differences and by providing a framework for dealing with issues of sexuality and sexual health that takes cultural values into consideration while adhering to best practices in patient care

Shaping Minds Guy Ramsay,2008-11-18 Mental illness is an increasing concern of government health services across the globe It is timely therefore that community education about mental illness is subject to discourse analysis Shaping Minds explores how the psychoeducational message is presented to Chinese speaking audiences in China Taiwan and Australia The book uniquely examines community education materials in a language rarely examined by discourse

analysts but which is nevertheless spoken by around a fifth of the world's population and constitutes an important minority language throughout the Western world. The book identifies the discursive features that characterise the Chinese language texts and analyses them cross culturally highlighting the impact of cultural traditions political systems and dominant conceptions of society. These insights into how Chinese language community health pamphlets and handbooks are positioned to shape the minds of readers will engage both discourse analysts and mental health professionals providing services to Chinese speaking communities across the globe.

An original compilation of diverse sources on Chinese patterns of thinking and behavior, this comprehensive reference work is addressed primarily to social scientists, psychologists, psychiatrists and mental health professionals. More than 3500 bibliographic citations are included, some 1800 of which are abstracted. Materials were selected from a painstaking search of the literature in psychology, psychiatric and related disciplines and cover primarily Chinese and English language sources, although some relevant publications in other languages are also cited. By providing easy access to material often scattered in books, monographs and periodicals addressed to different audiences, this volume performs a major service for students and scholars involved in cross cultural or Chinese studies. The volume begins with an introductory chapter that presents quantitative data on publication trends and offers a qualitative evaluation of the literature. The studies that follow are divided into 13 chapters, largely based on the American Psychological Association content classifications. Within chapters, citations are arranged alphabetically by author. Items from non English sources have been translated into English while many English abstracts of Chinese publications were extensively edited or rewritten. In addition, an introduction and introductory notes to each chapter place the citations in context. As author index and an extensive subject index provide cross referencing and aid in literature searches. An invaluable acquisition for any library with a Chinese studies or psychology collection, this volume will both introduce readers to the Chinese psychological literature and facilitate
