Normed Rings:

Commutative Normed Rings I. Gelfand, D. Raikov, G. Shilov, 2001-10-31 From the Preface 1960 This book is devoted to an account of one of the branches of functional analysis the theory of commutative normed rings and the principal applications of that theory It is based on the authors paper written in 1940 hard on the heels of the initial period of the development of this theory The book consists of three parts Part one concerned with the theory of commutative normed rings and divided into two chapters the first containing foundations of the theory and the second dealing with more special problems Part two deals with applications to harmonic analysis and is divided into three chapters The first chapter discusses the ring of absolutely integrable functions on a line with convolution as multiplication and finds the maximal ideals of this ring and some of its analogues In the next chapter these results are carried over to arbitrary commutative locally compact groups and they are made the foundation of the construction of harmonic analysis and the theory of characters A new feature here is the construction of an invariant measure on the group of characters and a proof of the inversion formula for Fourier transforms that is not based on theorems on the representation of positive definite functions or positive functionals The last chapter of the second part the most specialized of all the chapters is devoted to the investigation of the ring of functions of bounded variation on a line with multiplication defined as convolution including the complete description of the maximal ideals of this ring The third part of the book is devoted to the discussion of two important classes of rings of functions regular rings and rings with uniform convergence The first of the chapters essentially studies the structure of ideals in regular rings The chapter ends with an example of a ring of functions having closed ideals that cannot be represented as the intersections of maximal ideals The second chapter discusses the ring $C(S)$ of all bounded continuous complex functions on completely regular spaces S and various of its subrings Since noncommutative normed rings with an involution are important for group theoretical applications the paper by I M Gelfand and N A Naimark Normed Rings with an Involution and their Representations is reproduced at the end of the book slightly abridged in the form of an appendix This monograph also contains an account of the foundations of the theory of commutative normed rings without however touching upon the majority of its analytic applications The reader should have knowledge of the elements of the theory of normed spaces and of set theoretical topology For an understanding of the fourth chapter the reader should also know what a topological group is It stands to reason that the basic concepts of the theory of measure and of the Lebesgue integral are also assumed to be known

The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts.

The Secret History is a masterful and thrilling novel that will keep you guessing until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
