Cory, 2019-06-03 From the Preface The present work is intended to meet the wants of a large number of persons especially
sportsmen who are interested in birds and would like to know their names but often find it no easy task to identify them by
the bird books To all such I offer this Key in which the species are arranged in groups according to size and believe it will
enable any one unfamiliar with birds to identify with Comparative ease any species of our North American Anatid Birds vary
so much in size that the length of any one specimen cannot be accepted as a standard for others of the same species The
length measure is nevertheless of value to enable us to form an approximate idea of the size of the bird The length of the
wing is however much less variable and is an important aid to the identification of many species In fact the variation is so
small and constant that allowing for possible extremes they may be arranged in groups according to length of wing The
identification of any species then becomes a very simple matter as usually the birds contained in each group are so few in
number that characteristic differences in each species are easily indicated Let us assume for example we have before us a
bird which we wish to identify We first measure the wing see directions for measurements illustrated page 7 and we find the
wing measures 5 90 inches long We now turn to the Index to Key and find that Group I contains birds having the wing
measuring from 5 50 to 6 50 inches long Turning to Group I we find it contains two sections Section 1 comprising ducks
having a hind toe without flap or lobe and Section 2 comprising ducks having a flap on the hind toe As our duck has a flap on

its hind toe it evidently belongs to this section We find Section 2 divided in two parts Part 1 with tail feathers not stiff and pointed and Part 2 tail feathers stiff and pointed Our duck has stiff pointed tail feathers and therefore belongs in Part 2 Part 2 contains two species one having front of head and cheeks black the other with sides of head more or less white As our duck has a patch of white on the side of the head it must therefore be the Ruddy Duck *Erismaturus rubida* **The Ducks, Geese and Swans of North America** Francis H.
