Proceedings of the Annual Meeting American Hearing Society, 1928 **The Volta Review** , 1928 Overdiagnosed H. Gilbert Welch, Lisa Schwartz, Steve Woloshin, 2012-01-03 A nationally recognized expert offers a searing exposé of Big Pharma and the American healthcare system's zeal for excessive medical testing. More screening doesn't lead to better health but can turn healthy people into patients. Going against the conventional wisdom reinforced by the medical establishment and Big Pharma that more screening is the best preventative medicine, Dr. Gilbert Welch builds a compelling counterargument that what we need are fewer, not more, diagnoses. Documenting the excesses of American medical practice that labels far too many of us as sick, Welch examines the social, ethical, and economic ramifications of a health care system that unnecessarily diagnoses and treats patients, most of whom will not benefit from treatment, might be harmed by it, and would arguably be better off without screening. Drawing on 25 years of medical practice and research on the effects of medical testing, Welch explains in a straightforward, jargon-free style how the cutoffs for treating a person with abnormal test results have been drastically lowered just when technological advances have allowed us to see more and more abnormalities, many of which will pose fewer health complications than the procedures that ostensibly cure them. Citing studies that show that 10% of 2,000 healthy people were found to have had silent strokes and that well over half of men over age sixty have traces of prostate cancer but no impairment, Welch reveals overdiagnosis to be rampant for numerous conditions and diseases, including diabetes, high cholesterol, osteoporosis, gallstones, abdominal aortic aneurysms, blood clots, as well as skin, prostate, breast, and lung cancers. With genetic and prenatal screening now common, patients are being diagnosed not with disease but with pre-disease or for being at high risk of developing disease. Revealing the economic and medical forces that contribute to overdiagnosis, Welch makes a reasoned call for change that would save us from countless unneeded surgeries, excessive worry, and exorbitant costs, all while maintaining a balanced view of both the potential benefits and harms of diagnosis. Drawing on data, clinical studies, and anecdotes from his own practice, Welch builds a solid, accessible case against the belief that more screening always improves health care.

The American Journal of the Medical Sciences , 1897 *Challenges and Current Research Status of Vertigo/Vestibular Diseases, volume III* Sulin Zhang, Andrea Castellucci, Hubertus Axer, Nicolas Perez-Fernandez, Jun Wang, 2025-11-05 This Research Topic is the third volume of the Research Topic *Challenges and Current Research Status of Vertigo/Vestibular Diseases*. Please see the first volume [here](#) and the second volume [here](#). Vertigo and vestibular diseases represent a significant area of research within the field of otolaryngology and neurology, given their complex nature and the profound impact they have on patients' quality of life. These disorders are characterized by symptoms such as dizziness, imbalance, and spatial disorientation, which can be debilitating and challenging to diagnose and treat. Current research has identified a range of underlying causes, from peripheral vestibular dysfunctions to central nervous system anomalies. Despite advancements in diagnostic techniques and therapeutic interventions, there remain substantial

gaps in understanding the pathophysiology of these conditions particularly in differentiating between peripheral and central causes of vertigo Recent studies have explored the role of genetic predispositions the impact of comorbid conditions such as sleep disorders and mental health issues and the effectiveness of various rehabilitation strategies However there is still a need for comprehensive research to address the multifaceted nature of these disorders and to develop more effective personalized treatment approaches This research topic aims to advance the understanding of vertigo and vestibular diseases by exploring their underlying mechanisms improving diagnostic accuracy and enhancing therapeutic strategies The objective is to address specific questions such as the differential diagnosis of peripheral versus central vertigo the role of vestibular dysfunction in cognitive impairment and the effectiveness of multimodal therapy programs By testing hypotheses related to vestibular compensation and rehabilitation this research seeks to contribute to the development of innovative solutions for managing these complex disorders To gather further insights into the challenges and current research status of vertigo and vestibular diseases we welcome articles addressing but not limited to the following themes Differential diagnosis of peripheral and central positional vertigo Recurrence and residual symptoms of benign paroxysmal positional vertigo Inner ear malformation and vestibular dysfunction Sleep disorders and vestibular disease Vestibular testing and imaging in patients with vertigo or vestibular disorders Cognitive impairment and vestibular disorders Multisensory integration and vestibular disorders Mental diseases anxiety depression insomnia etc and vertigo disorders Research on vestibular compensation and rehabilitation training Multimodal therapy programs for dizziness and vertigo Therapy concepts for persistent postural perceptual dizziness PPPD Functional brain states in vertigo dizziness Age associated aspects of dizziness vertigo Epidemiological investigation of vertigo or vestibular disorders Molecular and genetic studies of vertigo or vestibular disorders
