The Mathematical Theory of Nonblocking Switching Networks Frank Hwang, 2004 The first edition of this book was the first to cover in depth the mathematical theory of nonblocking multistage interconnecting networks which is applicable to both communication and computer networks. This comprehensively updated new edition not only introduces the classical theory of the fundamental point to point network but also has a renewed emphasis on the latest multicast and multirate networks. The book can serve as either a one or two semester textbook for graduate students of information science, electronic communications and applied mathematics. In addition as all the relevant literature is organized and evaluated under one structured framework the volume is an essential reference for researchers in those areas
