## **Mathematics Teaching In The Early Years An Investigation Of Teachers Subject Knowledge:**

**Mathematics Teaching in the Early Years** Carol Aubrey, 2013-04-03 Young children start school already able to do a surprising amount of mathematics This book examines the nature and origin of subject knowledge and is based on information gathered from observing the interactions between teachers and their first year pupils It demonstrates the necessity of the classroom teacher to draw on many kinds of knowledge in order to deal with various issues surrounding classroom learning and teaching Two important core areas are knowledge of lesson structure and of subject matter this book address the area of subject matter and as such it should be of interest to classroom teachers and lecturers in education

### **Developing Primary**

**Mathematics Teaching** Tim Rowland, Fay Turner, Anne Thwaites, Peter Huckstep, 2009-03-09 How can KS1 2 teachers improve their mathematics teaching This book helps readers to become better more confident teachers of mathematics by enabling them to focus critically on what they know and what they do in the classroom Building on their close observation of primary mathematics classrooms the authors provide those starting out in the teaching profession with a four stage framework which acts as a tool of support for developing their teaching making sense of foundation knowledge focusing on what teachers know about mathematics transforming knowledge representing mathematics to learners through examples analogies illustrations and demonstrations connection helping learners to make sense of mathematics through understanding how ideas and concepts are linked to each other contingency what to do when the unexpected happens Each chapter includes practical activities lesson descriptions and extracts of classroom transcripts to help teachers reflect on effective practice

*Mathematical Knowledge in Teaching* Tim Rowland, Kenneth Ruthven, 2011-01-06 The quality of primary and secondary school mathematics teaching is generally agreed to depend crucially on the subject related knowledge of the teacher However there is increasing recognition that effective teaching calls for distinctive forms of subject related knowledge and thinking Thus established ways of conceptualizing developing and assessing mathematical knowledge for teaching may be less than adequate These are important issues for policy and practice because of longstanding difficulties in recruiting teachers who are confident and conventionally well qualified in mathematics and because of rising concern that teaching of the subject has not adapted sufficiently The issues to be examined in *Mathematical Knowledge in Teaching* are of considerable significance in addressing global aspirations to raise standards of teaching and learning in mathematics by developing more effective approaches to characterizing assessing and developing mathematical knowledge for teaching

**Children's Mathematics** Elizabeth Carruthers, Maulfry Worthington, 2006-08-07 In Case Study 5 a grassroots Children's Mathematics Network group the initiative supported the participants in their professional change by giving them a space for the detailed and joint consideration of children's mathematical thinking Another significant feature of this initiative is its focus on careful consideration and analysis of children's mathematics and the ways in which professionals can support and

encourage the children's mathematical thinking and reasoning. The standard of the mathematical understanding thinking and reasoning that the displays revealed was far higher than the specified curriculum objectives for children of this age.

Researching Effective CPD in Mathematics Education RECME project NCETM 2009. The review also plays great score by play based learning of a mathematical nature and makes specific recommendations regarding early mark making as a precursor to abstract mathematical symbolism. Section 115 features children's mathematical graphics and emphasises. The role of mark making in children's cognitive development is set out in the taxonomy Carruthers and Worthington 2006. The report recommends that local authorities leaders managers and head teachers should provide a culture with a significant focus on mathematical mark making and a learning environment that encourages children to choose to use their own mathematical graphics to support their mathematical thinking and processes. The Williams Maths Review DCSF 2008. At the very heart of the success of the book is the authors ability to see mathematics through young children's eyes by listening to and reflecting on the constant efforts made by children to make sense of their world. This is a liberating book which proposes that the teaching of mathematics could and should be a highly creative and enjoyable process. Branwen Llewelyn Jones Early Years Consultant at PACE Ltd TACTYC Ground breaking. To single out any one chapter would be unfair because there is something thought provoking and inspirational throughout. If you want to expand your understanding upwards and outwards then get a copy soon. Times Educational Supplement I first read Children's Mathematics Making Marks Making Meaning a couple of years ago and it had an immediate impact on my own thinking and teaching and the work I do with trainee teachers. I'm sure you will find it compelling reading too. I think it has the potential to change in a fundamental way how we think about early mathematical development. Lynne McClure Editor Math Coordinator's File Mathematics Association. In their exceptionally readable and informative book Children's Mathematics Making Marks Making Meaning Carruthers and Worthington 2006 draw attention to one of the main goals of early years teaching that is to help children make links between the mathematics they have already encountered and continue to engage with at home and the more abstract mathematics of the school. These authors suggest that by encouraging children to represent mathematical ideas in their own ways and crucially by talking to the pupils about the marks they have made we are given a window onto their thinking that may otherwise be inaccessible. Liz Pumphrey NRICH. This book draws on the authors many years of teaching children aged three to eight years and also on their extensive research with children in the home nursery and school. The authors explain the development and range of young children's mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods. Combining theory and practice this acclaimed book demonstrates how children's own mathematical graphics are highly creative and show deep levels of thinking. The authors show how this is the key to success in school mathematics and to higher levels of achievement. The authors are winners of TACTYC's 2003 Jenefer Joseph Award for the Creative Arts 3-8 awarded for their

*Improving Student Achievement in Mathematics* ,1999 **Research and Debate in Primary Geography** Simon Catling,2017-10-02 This book brings together recent papers which make important contributions to understanding and developing primary geography It considers primary teachers and trainee teachers knowledge of geography how the primary curriculum uses geography teachers planning of geography teaching the way in which aspects of geography are taught what high quality geography might look like and children s geographical understanding and voices Though geography curricula change quite often in countries around the world the core matters noted above remain of constant and vital importance The papers in this book either concern research with primary teachers and children or consider key concerns in primary geography providing important perspectives for thinking about future developments in geography teaching and curriculum initiatives in primary schools This is a stimulating and enticing collection written by leading exponents of and experts in primary geography education This book was originally published as a special issue of Education 3 13 **Handbook of**

**Research on Improving Student Achievement** Gordon Cawelti,2004 This updated report is an essential tool for school leaders and practitioners alike and is the single most authoritative source for effective K 12 teaching and learning practices across the content areas This one volume brings together in readable concise language the authoritative research on effective classroom practices in all major disciplines currently taught in elementary and secondary schools the arts foreign language health language arts physical education mathematics social studies and science as well as generic practices that apply across all disciplines This third edition includes over 100 research based classroom strategies and features a new chapter that synthesises the research on high performing school districts and discusses ways school districts can support instructional improvement *Improving Student Achievement in Mathematics* Douglas A. Grouws,Kristin J. Cebulla,2000

The ideas presented here are based on the idea that in order to succeed efforts to improve instruction must focus on the existing knowledge base in respect of effective teaching and learning The practises proposed to increase the effectiveness of teaching and learning are the extent of the students opportunity to learn mathematics content bears directly and decisively on student mathematics achievement focusing instruction on the meaningful development of important mathematical ideas increases the level of student learning students can learn both concepts and skills by solving problems giving students both an opportunity to discover and invent new knowledge and an opportunity to practise what they have learned improves student achievement teaching that incorporates students intuitive solution methods can increase student learning especially

when combined with opportunities for student interaction and discussion using small groups of students to work on activities problems and assignments can increase student mathematics achievement whole class discussion following individual and group work improves student achievement teaching mathematics with a focus on number sense encourages students to become problem solvers in a wide variety of situations and to view mathematics as a discipline in which thinking is important long term use of concrete materials is positively related to increases in student mathematics achievement and improved attitudes towards mathematics using calculators in the learning of mathematics can result in increased achievement and improved student attitudes

Researching the Early Years Continuum Pat Broadhead,1996 This publication draws together research undertaken by nursery and primary teachers in conjunction with Local Education Authorities and by Higher Education staff It focuses on practice and provision in the early years of education and care looking predominantly at children between the ages of three and eight The research is drawn upon in making a case for considering the early years as a continuum of development and learning The aspects of this continuum that are addressed include special needs language development parental involvement four year olds in school learning and teaching mathematics learning and teaching science and assessment It is hoped that the publication can add weight to the call for well focused initial training and for ongoing professional support for all working with young children the complexities of the learning development continuum need to be asserted and understood In this respect further research is clearly needed and it is hoped that the future might witness a renewed commitment to substantially funded early years research The book is intended for both practitioners and researchers Several of the reported research projects would lend themselves to replication by teachers seeking to explore their own practice All have an integrity and rigour that can help raise the status and profile of early years research
