**Advanced Data Analysis by Combining Soft Computing and Statistics** Christian Borgelt,María Ángeles Gil,João M.C. Sousa,Michel Verleysen,2014-09-20 Soft computing as an engineering science and statistics as a classical branch of mathematics emphasize different aspects of data analysis Soft computing focuses on obtaining working solutions quickly accepting approximations and unconventional approaches Its strength lies in its flexibility to create models that suit the needs arising in applications In addition it emphasizes the need for intuitive and interpretable models which are tolerant to imprecision and uncertainty Statistics is more rigorous and focuses on establishing objective conclusions based on experimental data by analyzing the possible situations and their relative likelihood It emphasizes the need for mathematical methods and tools to assess solutions and guarantee performance Combining the two fields enhances the robustness and
