Bird, C. Carroll Morgan, James C.P. Woodcock, 2014-01-15 **Mathematics of Program Construction** Roland Backhouse, José Nuno Oliveira, 2014-03-12 This volume contains the proceedings of MPC 2000 the 5th international conference on Mathematics of Program Construction This series of conferences aims to promote the development of mathematical principles and techniques that are demonstrably useful and usable in the process of constructing computer programs whether

implemented in hardware or software The focus is on techniques that combine precision with concision enabling programs to be constructed by formal calculation Within this theme the scope of the series is very diverse including programming methodology program specification and transformation programming paradigms programming calculi and programming language semantics The quality of the papers submitted to the conference was in general very high However the number of submissions has decreased compared to the previous conferences in the series Each paper was refereed by at least five and often more committee members In order to maintain the high standards of the conference the committee took a stringent view on quality this has meant that in some cases a paper was rejected even though there was a basis for a good conference or journal paper but the submitted paper did not meet the committee's required standards In a few cases a good paper was rejected on the grounds that it did not fit within the scope of the conference

Mathematics of Program Construction Jan L.A. van de Snepscheut, 1989-06-07 The papers included in this volume were presented at the Conference on Mathematics of Program Construction held from June 26 to 30 1989 The conference was organized by the

Department of Computing Science Groningen University The Netherlands at the occasion of the University's 375th anniversary The creative inspiration of the modern computer has led to the development of new mathematics the mathematics of program construction Initially concerned with the posterior verification of computer programs the mathematics have now matured to the point where they are actively being used for the discovery of elegant solutions to new programming problems Initially concerned specifically with imperative programming the application of mathematical methodologies is now established as an essential part of all programming paradigms functional logic and object oriented programming modularity and type structure etc Initially concerned with software only the mathematics are also finding fruit in hardware design so that the traditional boundaries between the two disciplines have become blurred The varieties of mathematics of program construction are wide ranging They include calculi for the specification of sequential and concurrent programs program transformation and analysis methodologies and formal inference systems for the construction and analysis of programs The mathematics of specification implementation and analysis have become indispensable tools for practical programming

Mathematics of Program Construction Richard Bird, Carroll Morgan, Jim Woodcock, 1993 Not very long ago the uninhibited use of mathematics in the development of software was regarded as something for academics alone Today there is more and more interest from industry in formal methods based on mathematics This interest has come from the success of a number of experiments on real industrial applications Thus there is not only a belief but also evidence that the study of computer programs as mathematical objects leads to more efficient methods for constructing them The papers in this volume were presented at the Second International Conference on the Mathematics of Program Construction held at St Catherine's College Oxford June 29 July 3 1992 The conference was organized by the Oxford University Programming Research Group and continued the theme set by the first the use of crisp clear mathematics in the discovery and design of algorithms The second conference gives evidence of the ever widening impact of precise mathematical methods in program development There are papers applying mathematics not only to sequential programs but also to parallel and on current applications real time and reactive systems and to designs realised directly in hardware The volume includes 5 invited papers and 19 contributed papers PUBLISHER'S WEBSITE
