Gaither's Dictionary of Scientific Quotations Carl C. Gaither, Alma E. Cavazos-Gaither, 2008-01-08 Scientists and other keen observers of the natural world sometimes make or write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an unprecedented collection of approximately 18 000 quotations related to a broad range of scientific topics

ZAMM E BOOK **More Joy of Mathematics** Theoni Pappas, 1991 Explores the many relationships of mathematics and facets of everyday life [Best Practice Approaches for Mixed Methods Research in Psychological Science, volume II](#)

Gudberg K. Jonsson, Mariona Portell, M. Teresa Anguera, José Luis Losada, Judith Schoonenboom, 2025-10-27 Having started as a small movement in the 1980 s the study of mixed methods research burst onto the scene around the beginning of the second millennium After decades of intense dispute between supporters of the qualitative perspective and their quantitative counterparts with both sides having grown deeply entrenched in their respective views a complementary approach promising the possibility of integration had finally been proposed By that time however the vast majority of researchers had committed to one stance or the other very few of us argued that the two approaches could be complementary Since then the number of publications scientific meetings and other activities devoted to the mixed methods approach has increased exponentially throughout the world At a substantive level we are pleased to see that a growing number of fields are generating mixed methods research and we are eager to assist in promoting this trend But naturally the field has experienced some growing pains a certain degree of heterogeneity in terms of approaches differences of opinion regarding certain conceptualizations for example mixed methods vs multimethods numerous design taxonomies multiple ways of integrating qualitative and quantitative elements and various positions on how best to overcome the enduring lack of symmetry between qualitative and

quantitative aspects The methodological and substantive spectrum is vast and broad possibly because the mixed methods approach has become obligatory for much research not only in psychology but in practically all branches of the social sciences

Essays in Humanistic Mathematics Alvin Murray White,1993 The mathematics presented in this volume goes beyond the facts formulas and algorithms that most students associate with mathematics to a presentation of mathematics as an intellectual discipline with a human perspective and a history that matters Humanistic mathematics challenges dogmatic teaching styles that expect students to parrot the lecturer It demands creativity from both the teacher and student Humanistic mathematics carries with it an awareness of and a sensitivity to those things mathematics shares with the other humanities Humanistic dimensions of mathematics include An appreciation of the role of intuition in understanding and creating concepts that appear in their finished version to be the result of a merely technical process An understanding of the value judgements in the growth of any discipline Logic alone never completely accounts for what is investigated how it is investigated or why it is investigated The movement which began as the personal vision of a few has now become a major part of mathematical culture What was viewed with skepticism is now accepted and expected Humanistic mathematics is a recent rediscovery of an idea that goes back to Plato D'Alembert Wilder Bronowski Cassirer It has provided a vocabulary for previously unarticulated concepts and approaches There are no answers to the question what is important in mathematics We can only ask what is important in mathematics to human beings with given abilities and limitations at a given point in their mathematical development
