Chapin,Art Johnson,2000 Written to help teachers deepen their understanding of the mathematics they teach the authors present a concise description of the mathematical ideas encountered in the elementary grades Each of the book s 13 chapters focuses on an important math topic and interspersed throughout each chapter are many activities that bring to life the mathematical information presented Gender differences and disparities in socialization contexts: How do they matter for healthy relationships, wellbeing, and achievement-related outcomes? Caterina Fiorilli,Daniela Barni,Jan Retelsdorf,Joyce Endendijk,2023-01-05 Children's Mathematical Thinking in Primary Years Julia Anghileri,2005-05-01 This popular Continuum series intended chiefly for teachers and trainee teachers places strong emphasis on practice but at the same time incorporates the latest research in the field The book demonstrates a strong belief in the ability of children to learn and in the ability of teachers to increase children s learning potential The series authors are distinguished practitioners in their fields who write with authority but without jargon With the increasingly popular constructivist framework for learning teachers are coming to recognize the limitations of taught procedures and to find ways to encourage children to generate their own knowledge and understanding in mathematics The challenge for teachers is to promote an environment that encourages mathematical thinking in which pupils of all abilities are able to achieve their full potential This text brings together experiences of teachers and researchers who examine the ways children work mathematically in order to provide an enhanced learning environment within the classroom It also addresses key issues in current maths teaching *Effective Learning and Teaching in Engineering* Caroline Baillie,Ivan Moore,2004-08-19 Written to meet the need of teachers lecturers and tutors at all stages in their career this is the authoritative handbook for anyone wanting to and understanding the key issues best practices and new developments in the world of engineering education and training The book is divided into sections which analyse what students should be learning how they learn and how the teaching and learning process and your own practice can be improved With contributions from experts around the world and a wealth of innovative case study material this book is an essential purchase for anyone teaching engineering today The Effective Learning and Teaching in Higher Education series deals with improving practice in higher education Each title is written to meet the needs of those seeking professional accreditation and wishing to keep themselves up to date professionally Multicultural Children in the

Early Years Peter Woods, Mari Boyle, Nick Hubbard, 2020-03-13 How do multicultural children and their parents experience the very beginning of their school careers How do teachers mediate the demands of the educational system and how do the children adapt What kind of access to the National Curriculum is offered to multicultural children Originally published in 1999 the authors answer these questions by drawing on two years intensive research in three multi ethnic institutions They explore teachers values and beliefs and how they attempt to put them into practice They describe how at times teachers were constrained to get things done because of pressures operating on them but at other times taught creatively in a way particularly relevant to the children s concerns and cultures The authors studied the children s experiences on their transition into school and argue that they were inducted into not only a general pupil role but also one based on an anglicised model of pupil Opportunities for learning which children found most meaningful came notably from free play but these became gradually more limited as they engaged with the National Curriculum These young children were forming complex identities as they sought to respond to the varying influences operating them Their parents saw a cultural divide opening up between home and school Many suggestions for practice and policy are made in the course of the book and are still relevant today

Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also
