## **Moon Exploration:**

**Return to the Moon** Harrison Schmitt,2007-12-28 Former NASA Astronaut Harrison Schmitt advocates a private investor based approach to returning humans to the Moon to extract Helium 3 for energy production to use the Moon as a platform for science and manufacturing and to establish permanent human colonies there in a kind of stepping stone community on the way to deeper space With governments playing a supporting role just as they have in the development of modern commercial aeronautics and agricultural production Schmitt believes that a fundamentally private enterprise is the only type of organization capable of sustaining such an effort and eventually even making it pay off

Volume 10 Technology of Lunar Exploration is an overview of the technical base of the lunar exploration problem. This volume is organized into six sections encompassing 35 that follow the various stages of accomplishment of a lunar mission involving landing on or orbiting the moon and returning to the earth. The first section is devoted to the problem of trying to define the lunar environment emphasizing the theories of the lunar environment as it relates to the internal structure of the moon. This section also describes some activities to achieve a reasonable theory concerning what might be encountered in some of the previous lunar flight programs. The second section explores the problems associated with the limitations imposed upon lunar missions by the launch vehicles and launching facilities. The third section looks at the spacecraft systems and techniques required for lunar missions particularly the technology and specific subsystems in relation to the requirements imposed by specific lunar mission objectives. The fourth section deals with the actual landing on the moon and the subsequent surface operations while the fifth section covers the lunar launch return flight re entry and subsequent landing on earth. The sixth section reports the status of the projects that represent the United States lunar exploration program which integrates the technologies developed in the preceding sections into certain discrete projects.

*Early Exploration of the Moon* Tom Lund, 2018-12-26 Luna 2 launched by the USSR in 1959 was the first spacecraft from Earth to land on the moon. That first voyage was followed by increasingly capable lunar exploration spacecraft from Russia and the United States. A total of 36 successful lunar exploration missions were conducted from 1959 to the last Apollo manned exploration in 1972 and the final travels of the Lunokhod lunar rover in 1973. Of all the missions that of Apollo 17 was the pinnacle of manned space exploration. Apollo 17 astronauts traveled 21 miles on the lunar surface in a dune buggy type vehicle stopping frequently to explore and gather samples. The spacecraft that enabled lunar exploration were ingenious and reflected the best efforts of talented people working with the technology of the day. This book showcases the engineering involved in those incredible machines. The spacecraft covered and their missions are listed below. From the United States Ranger Photography en route to lunar impact. Lunar Orbiter Photography of front and back side of moon. Surveyor Soft landing photography and soil analysis. Apollo Manned exploration. Lunar Rover expanded range. From the USSR Luna 2 Photography en route to lunar impact. Luna 3 Photography of back side of moon on flyby. Luna 9 and 13 Soft landing photography and soil analysis. Luna 10 11 12 14 Photography from lunar orbit. Luna 16 20 24 Soft landing return of soil sample to Earth. Lunokhod 1 2 Lunar roving vehicle driven from Earth. L1 Planned manned lunar flyby but only flew unmanned. L3 Planned manned lunar landing but never flew to moon. To tell the story of these spacecraft Tom Lund draws on over 40 years work on aircraft and spacecraft systems. He

was technical lead for the landing radars for the Surveyor and Apollo spacecraft and his practical experience is augmented by master's degrees in electrical engineering physics and business administration **Moon First and Mars Second** Allyson Reneau, 2020-11-09 This SpringerBrief explores the technological economic physiological and psychological comparisons between a journey to the Moon versus a journey to Mars taking into consideration the national and international perspectives at play. The author spent over six years interviewing leading space experts from around the world to learn why lunar habitats and the creation of a permanent presence on the Moon are an essential next step to human exploration and settlement in space. Practical reasons related to energy telecommunications and networking robotic systems medical and scientific research material processing and more show why it must be the Moon First and Mars Second. These findings and recommendations have been adopted by current NASA Administrator Jim Bridenstine as well as the current U.S. president. The research in this text reflects the author's experiences working internally within NASA Headquarters the FAA Commercial Spaceflight Office as well as the International Space University. It is partially based on Reneau's award winning Harvard thesis in conjunction with her Master's in International Relations Astronomy and Space Exploration Russell K.

Rickert, 1974 **The Scientific Context for Exploration of the Moon** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Scientific Context for Exploration of the Moon, 2006-09-19

Because of the Moon's unique place in the evolution of rocky worlds it is a prime focus of NASA's space exploration vision. Currently NASA is defining and implementing a series of robotic orbital and landed missions to the Moon as the initial phase of this vision. To realize the benefits of this activity NASA needs a comprehensive well validated and prioritized set of scientific research objectives. To help establish those objectives NASA asked the NRC to provide guidance on the scientific challenges and opportunities enabled by sustained robotic and human exploration of the Moon during the period 2008-2013. This interim report which focuses on science of the Moon presents a number of scientific themes describing broad scientific goals important for lunar research discussions of how best to reach these goals a set of three priority areas that follow from the themes and recommendations for these priorities and related areas. A final report will follow in the summer of 2007.

**Lunar Exploration** National Research Council (U.S.). Space Science Board, National Science Council, Space Science Board, 1969 **To a Rocky Moon** Don E. Wilhelms, 1993 When human exploration of the lunar surface began in 1969 it marked not only an unprecedented technological achievement but also the culmination of scientific efforts to understand lunar geology. Memoirs of the Apollo astronauts have preserved the exploratory aspects of these missions now a geologist who was an active participant in the lunar program offers a detailed historical view of those events including the pre-Apollo era from a heretofore untold scientific perspective. It was the responsibility of the scientific team of which Don Wilhelms was a member to assemble an overall picture of the Moon's structure and history in order to recommend where on the lunar surface fieldwork should be conducted and samples collected. His book relates the site selection process in detail and draws

in concomitant events concerning mission operations to show how they affected the course of the scientific program. While discussing all six landings in detail it tells the behind the scenes story of telescopic and spacecraft investigations before, during and after the manned landings. Intended for anyone interested in the space program, the history of science or the application of geology to planetology, *To a Rocky Moon* will leave all readers with a better idea of what the Moon is really like. In so expertly summarizing this earlier phase of exploration it stands as an authoritative touchstone for those involved in the next.
