## Organisation Of Science:

**The Intellectual and Social Organization of the Sciences** Richard Whitley,2000 In a rapidly changing and interdisciplinary world it is important to understand the nature and generation of knowledge and its social organization Increasing attention is paid in the social sciences and management studies to the constitution and claims of different theories perspectives and paradigms This book is one of the most respected and robust analyses of these issues For this new paperback edition Richard Whitley a leading figure in European business education has written a new introduction which addresses the particular epistemological issues presented by management and business studies He approaches the sciences as differently organized systems for the production and validation of knowledge systems which become established in particular contexts and which generate different sorts of knowledge He identifies seven major types of scientific field and discusses the establishment and growth of these sciences including the major consequences of the nineteenth century expansion of employment opportunities for researchers the competitive pursuit of public reputations and the domination of intellectual work by employees He also examines the divergences in the way research is organized and controlled both in different fields and in the same field within different historical circumstances This book will be of interest to all graduate students concerned with the social study of knowledge science technology and the history and philosophy of science

Science International Frank Greenaway,1996-10-24 Science International is the history of a worldwide organization of scientists now involving thousands of participants which was started a century ago when a few visionaries founded the International

Association of Academies 1899 1919 This was succeeded by an International Research Council which in 1932 became the International Council of Scientific Unions ICSU The initiative to have an international arena for scientists survived two global

wars as well as immense economic and social change in the twentieth century This history describes how national academies and international unions of scientists from specific disciplines learned to work together and shows how from these alliances sprang great co operative projects such as the International Geophysical Year and the International Biological Programme as well as the creation of a global scientific organization directed to the study of the entire planet and prospects for the human race    **Competences of IT Architects ,      Communication, Organization, and Science** Jerome Rothstein,1958
