Introduction to the World of Data and Spotify The digital revolution has transformed the way we consume music and Spotify is one of the biggest drivers of this transformation The streaming app launched in 2008 has grown exponentially not just as a music service but as a platform that analyzes collects and uses data on its users behavior to personalize the music experience for billions of people around the world The key to Spotify s success is not only its vast library of music but its ability to use data to influence shape and even predict users musical tastes The Era of Music Streaming Before Spotify the music industry was dominated by CD purchases individual downloads and of course radio While radio has been a dominant platform for introducing new music for decades it has its limitations Spotify with its data driven model has revolutionized this dynamic by offering nearly unlimited access to music while also personalizing track suggestions based on users listening behavior The Power of Data Spotify s biggest advantage over other music platforms is its ability to capture data Every time a user listens to a song skips a track or saves a song to a playlist Spotify collects this information and uses it to improve its music recommendations Spotify s recommendation algorithm is powered by a wealth of data about users preferences creating a personalized experience for each user How Data Shapes Music Preferences Data collection goes beyond just choosing songs Spotify monitors listening time playlist engagement repeat tracks and even the times when a user is most likely to listen to a certain style of music This data is then processed to create a detailed profile of each user helping the platform predict which songs are most likely to appeal to them Practical example Imagine that you are a fan of pop music and frequently listen to the most popular tracks on the charts Spotify by noticing this pattern can recommend similar songs that are starting to gain popularity or even songs by emerging artists in the same style influencing your musical tastes before you have even heard of them You Have Not Yet

Fraud and cheating existed in the music business like any business long before streaming happened. Back when charts were based on people reporting sales numbers on phone calls those people could be bribed to say different numbers. Radio DJs could be paid to pretend they were playing a song more because they just liked it. Accounting could be manipulated. Streaming doesn't necessarily make cheating easier overall but it definitely makes it more accessible to introverts. Instead of making phone calls you can write computer programs that pretend to be streaming music listeners. Piracy maintains a certain dastardly allure. Streaming music fraud is not to be brutally honest the most glamorous or profitable form of dastrardry. Streaming rewards accumulate in tiny micro transactions and the software necessary to laboriously accumulate micro royalties illegitimately isn't any easier to write than legal software for which you can get paid normal salaries. It only really scales if you become a service provider selling fraud as a service and then you're a business with business problems instead of a pirate with a rakish eye patch and the sea air in your hair. If you want to cheat your way to riches you're better off trying to do it in junk stocks or cryptocurrencies where there's way too much money sloshing around and the distinction between legitimate behavior and cheating is fuzzy. So you might have thought that fraud wouldn't be a big issue in streaming. Buy the book and carry on reading. *Platforms, Promotion, and Product Discovery* Luis Aguiar (Research fellow), Joel Waldfogel, 2018.

Digitization has vastly increased the amount of new music produced and available directly to consumers. While this has levelled the playing field between already prominent and new artists creators may now be dependent on platform decisions about which songs and artist to promote. With Spotify emerging as a major interactive streaming platform this paper explores the effect of Spotify's playlists on both the promotion of songs and the discovery of music by new artists using four approaches. First we examine songs streaming volumes before and after their addition to and removal from major global playlists. Second we compare streaming volumes for songs just on and just off algorithmic top 50 playlists. Third we make use of cross country differences in inclusion on New Music Friday lists using song fixed effects to explain differences in streaming. Fourth we develop an instrumental variables approach to explaining cross country New Music Friday rank differentials based on home bias. Being added to Today's Top Hits a list with 18.5 million followers during the sample period raises streams by almost 20 million and is worth between 116 000 and 163 000. Inclusion on New Music Friday lists substantially raises the probability of song success including for new artists.

**Spotify Teardown** Maria Eriksson, Rasmus Fleischer, Anna Johansson, Pelle Snickars, Patrick Vonderau, 2019-02-19. An innovative investigation of the inner workings of Spotify that traces the transformation of audio files into streamed experience. Spotify provides a streaming service that has been welcomed as disrupting the world of music. Yet such disruption always comes at a price. Spotify Teardown contests the tired claim that digital culture thrives on disruption. Borrowing the notion of teardown from reverse engineering processes in this book a team of five researchers have playfully disassembled Spotify's product and the way it is commonly understood. Spotify has been hailed as the solution to illicit downloading but it began as a partly illicit enterprise that grew out of the

Swedish file sharing community Spotify was originally praised as an innovative digital platform but increasingly resembles a media company in need of regulation raising questions about the ways in which such cultural content as songs books and films are now typically made available online Spotify Teardown combines interviews participant observations and other analyses of Spotify's front end with experimental covert investigations of its back end The authors engaged in a series of interventions which include establishing a record label for research purposes intercepting network traffic with packet sniffers and web scraping corporate materials The authors innovative digital methods earned them a stern letter from Spotify accusing them of violating its terms of use the company later threatened their research funding Thus the book itself became an intervention into the ethics and legal frameworks of corporate behavior
