An Introduction to Statistical Problem Solving in Geography Arthur J. Lembo, Jr., J. Chapman McGrew, Jr., 2023-10-27 The fourth edition of *An Introduction to Statistical Problem Solving in Geography* continues its standing as the definitive introduction to statistics and quantitative analysis in geography. Assuming no reader background in statistics, the authors lay out the proper role of statistical analysis and methods in human and physical geography. They delve into the calculation of descriptive summaries and graphics to explain geographic patterns and use inferential statistics: parametric and nonparametric to test for differences, t tests, ANOVA, relationships, regression, and correlation, and spatial statistics: point and area patterns, spatial autocorrelation. This edition introduces more advanced topics including logistic regression, two factor ANOVA, and spatial estimation, inverse distance weighting, Kriging. Many chapters also include thought provoking discussions of statistical concepts as they relate to the COVID 19 pandemic. Maintaining an exploratory and investigative approach throughout, the authors provide readers with real world geographic issues and more than 50 map examples. Concepts are explained clearly and narratively without oversimplification. Each chapter concludes with a list of major goals and objectives. An epilogue offers over 150 open ended geographic situations inviting students to apply their new statistical skills to solve problems currently affecting our world.

ArcGIS Pro and ArcGIS Online William Bajjali, 2023-10-18 This textbook serves as a practical guide for undergraduate and graduate students in geology, hydrology, ecology, and environmental sciences, teaching them applied GIS techniques. The focus is on ESRI's ArcGIS Pro, covering various tools for spatial geostatistical network and 3 D analysis. Additionally, it explores ArcGIS Online and working with web apps like Web Map StoryMaps and GEO App. GIS applications, especially in water and environmental problem solving, are rapidly growing worldwide. The demand for GIS experts utilizing spatial analysis in environmental science remains high.
